

LBT-V925CD

SERVICE MANUAL

AEP Model
UK Model

- LBT-V925CD is composed of following models.
As for the service manual, it is issued for each component model, then, please refer to it.

COMPONENT MODEL NAME FOR LBT-V925CD

MODEL	AEP, Italian	UK
PRE AMPLIFIER	TA-V925EE	TA-V925EE
POWER AMPLIFIER	TA-V925NE	TA-V925NE
CASSETTE DECK	TC-V925E	TC-V925E
TUNER	ST-V925E	ST-V925E
CD PLAYER	CDP-V925E	CDP-V925E
TURNTABLE SYSTEM	—	PS-V901

SPECIFICATIONS

General

Power requirements 220 V AC, 50/60 Hz (AEP, Italian model)
240 V AC, 50Hz (UK model)

Accessories supplied

Remote commander (1)
Batteries Sony SUM-3 (NS) (2)
AM loop antenna (1)
FM wire antenna (1)
Connecting cord (short) (1)
Connecting cord (long) (3)
Flat cord (1)

PARTS LIST

- Items marked "★" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

ACCESSORY & PACKING MATERIAL

Part No.	Description

UK Model

This set is the pre-amplifier section in LBT-V925CD.

SPECIFICATIONS

Inputs

	Jack type	Sensitivity	Impedance
PHONO IN	Phono	2.8 mV	50k ohms
TUNER, TAPE, VIDEO 1, VIDEO 2/DAT, VIDEO 3/CD, TAPE IN	Phono	200 mV	50k ohms
MIC	Phone	1 mV	10k ohms

Outputs

	Jack type	Voltage	Impedance
TAPE, DAT, VIDEO 1, VIDEO 2/DAT, LINE/MONITOR	Phono	200 mV	470 ohms

Power consumption 20 W

Dimensions 355 × 132 × 320 mm (w/h/d)
(14 × 5¹/₈ × 12³/₈ inches)

Weight Approx. 4.7 kg (10 lb 6 oz)

Digital parametric equalizer for sound control

This function employs digital processing to enable you to adjust the quality of the sound by raising and lowering the levels of specific frequency ranges.

Digital presence surround which allows you to select the surround system to match the music genre

This function features three types of surround – music, movie, and simulated – to allow you to match the surround system with the genre of the sound source and reproduce the sound as if you were actually experiencing it in a concert hall or movie theater. In addition, the amount of reverberation can be varied in order to reproduce sound with a sense of presence as if it were being listened to in a concert hall.

Digital dynamic sound for providing low-volume sound with a feeling of power

When listening at low volume levels, this function raises the level of hard to hear sounds and provides the sound with a good overall balance.

Abundant input and output jacks for handling digital transmission and a wide variety of AV equipment

This preamplifier is provided with optical inputs for connecting up to 2 digital components such as CD players and DAT decks, and video inputs for connecting up to 3 video components such as VTRs and video disc players.

Features

Digital drive preamplifier for creating vibrant sound

The preamplifier features a Digital Parametric Equalizer, Digital Presence Surround, and Digital Dynamic Sound. Enabling you to mold the musical sound to your individual taste. Also, you can easily adjust the music to your taste by selecting from various patterns (up to 200) which combine these three functions and are stored in the preamplifier's preset memory.

- 13 DIGITAL PRESENCE SURROUND selector and indicators
- 14 DIGITAL EFFECT switch and indicator
- 15 EQUALIZER RECORDING switch and indicator
- 16 DISPLAY button

Using the Preamplifier's Sound Manipulation Features

The preamplifier is equipped with three sound manipulation functions – an equalizer function, a surround function, and a dynamic sound function – for improving the sound in your listening environment.

The equalizer can be used to raise and lower the levels of specific frequency ranges. The surround function can be matched to the music genre or source to effectively reproduce a feeling of “being there”. The dynamic sound function can be used to give a powerful feeling to music when listening at low volume levels.

Making full use of these three functions allows you to create a variety of different sounds and effects and to maximize your music listening enjoyment.

- DP EQ (Digital Parametric Equalizer) – Level adjustment of specific frequency ranges
- RUN – Equalizer curve movement
- CROSS – Equalizer curve synthesis
- SLOPE – Equalizer curve slope selection
- DPS – Digital Presence Surround
- DDS – Digital Dynamic Sound
- DISP (Display) – Spectrum analyzer/Peak value display
- DATA CALL – Preset memory
- USER CALL – User memory

- 1 Play a compact disc or other program source.
- 2 Press the **DISPLAY** button a number of times until the **DEMO** indication appears on the display.

After “DIGITAL” is displayed, demo mode begins.

Demo Mode

This system is provided with a demo mode to allow you to get a taste of the rich variety of effects possible with the preamplifier functions. Before using the preamplifier to make adjustments to the sound, use the demo mode to experience the various effects while watching the changes on the display and listening to the differences in the quality of the sound produced by each effect. This mode demonstrates the effect of each of the following functions.

Using the Preamp's Sound Manipulation Features

Demo Mode Contents

**A** DP EQ (Digital Parametric Equalizer)

(Frequency range level increase/decrease display)

This shows how the level of each of the three frequency ranges – low, middle, and high – can be raised and lowered. This operation is fundamental to creating equalizer curves to suit your individual taste and listening environment.

B RUN

(Equalizer curve movement display)

This shows how the equalizer curve can be moved to the left and right. The sound changes as the curve moves.

C CROSS

(Equalizer curve synthesis display)

This shows what happens when two "hills" of an equalizer curve are moved toward each other and combined (synthesized) into one.

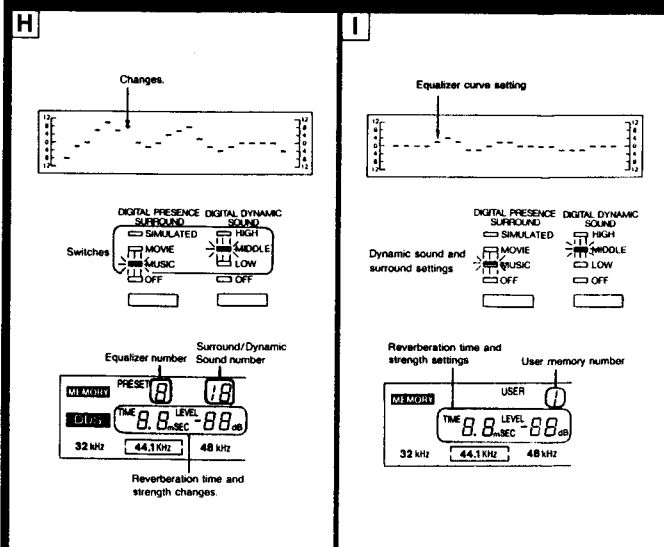

D SLOPE (EQ SLOPE)

(Equalizer curve slope selection display)

This shows how the attenuation (the rapidity with which the level is decreased) of the equalizer curve peak can be switched in two stages. The difference in the quality of the sound can be heard when the EQ SLOPE button is switched.

Using the Preamp's Sound Manipulation Features

Demo Mode

**H** DATA CALL

(Preset Memory)

Equalizer, dynamic sound, and surround settings have already been combined in various combinations and stored in the preamplifier's memory. You can choose from 200 different combinations (using the digital sound menu) according to the genre of the sound source and your individual taste. Three types of digital sound menus are called up and displayed, enabling you to hear the difference between the different sound fields. Each of the equalizer curve, dynamic sound, surround, and reverberation time and level settings are varied.

I USER CALL

(User Memory)

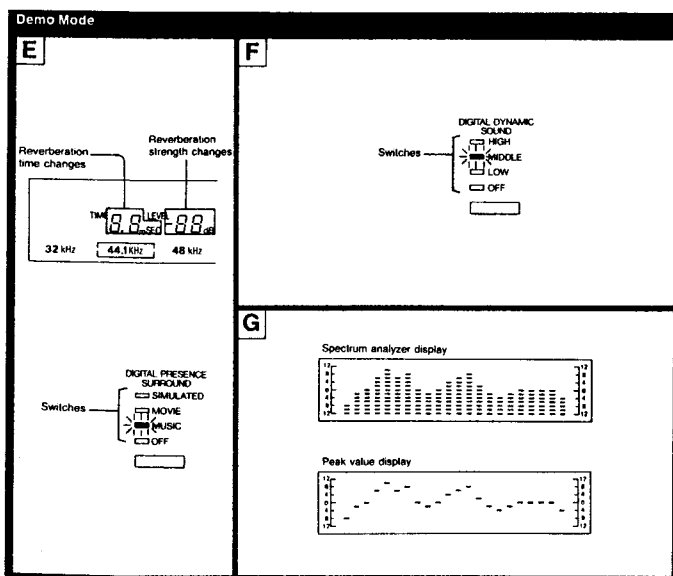

With this feature, you can adjust the equalizer, dynamic sound, and surround settings according to your individual taste and store the settings in the preamplifier's user memory, enabling you to easily recall your settings at any time. Three different hypothetical settings are recalled from user memory, allowing you to hear the differences between each of the sound fields. This shows how you can vary the equalizer curve, dynamic sound, and surround settings, as well as the surround reverberation time and strength settings.

Stopping Demo Mode and Making Sound Quality Adjustments

Press the equalizer, dynamic sound, or surround button you wish to adjust. Demo mode is automatically canceled.

Adjusting the Sound Using the Digital Parametric Equalizer

This feature allows you adjust the sound by raising and lowering the levels of specific frequency ranges.

**E** DPS (Digital Presence Surround)

(MUSIC, MOVIE, SIMULATED)

You can select the surround effect to fit the genre of the music, and you can also set the reverberation time and strength. These functions allow you to create a sound that has a feeling of "being there". This shows the difference between the three types of Digital Presence Surround (MUSIC, MOVIE, and SIMULATED).

F DDS (Digital Dynamic Sound)

(LOW, MIDDLE, HIGH)

When listening at low volume levels, the Digital Dynamic Sound function boosts hard to hear sounds to improve the overall balance of the sound. This shows the difference between the three types of Digital Dynamic Sound (LOW, MIDDLE, and HIGH).

G DISP (Display)

This shows how the display can be switched between the spectrum analyzer display and the peak value display.

At step 2:

Button	Frequency range
FREQUENCY 1	Low range
FREQUENCY 2	Middle range
FREQUENCY 3	High range

When the unit is shipped from the factory, or after the CLEAR button has been pressed to erase the adjustment settings (see page 62), each of the three frequency buttons is defined for a specific frequency range as shown in the above table, so decide what your goal is before proceeding. The adjustable frequency range can be freely moved left and right (low → high) along the frequency scale as explained in the next step. This allows each of the frequency buttons (1 – 3) to be used for any frequency range. For example, the FREQUENCY 1 button does not have to be used to adjust a

low-frequency range, but can be used instead to adjust a mid- or high-frequency range by moving it to the right along the scale. Once the FREQUENCY 1 – 3 buttons are set, the frequency range represented by the buttons remain unchanged until the buttons are readjusted.

At step 3:

<L or >: Shifts the frequency range to be adjusted to the left or right.
Δ or ∇: Raises or lowers the level of the frequency range centering around the blinking dot.

Note:

If two "hills" on the equalizer curve are combined and the peak of the resulting "hill" exceeds 12 dB, the dots which represent levels higher than 12 dB blink.

Adjusting the Sound Using the Digital Parametric Equalizer

Changing the slope of the adjusted curve

- 1 Check to make sure that one of the FREQUENCY 1-3 buttons is lit.
- 2 Select the curve slope.

Switches between a gentle slope and a sharp slope.

Confirming the effect of the adjustment

Every time the button is pressed, the sound is switched between the pre-adjustment settings and the adjusted settings, allowing you to hear and compare the difference.

Changing the display

The display switches every time the button is pressed.

Equalizer curve shows how the sound you hear is adjusted.

Spectrum analyzer 1 shows the level of the music signal at each frequency band in real time.

Spectrum analyzer 2 shows the maximum level value (peak value) of the music signal at each frequency band in real time.

Demo mode (page 49) indicates the start of demo mode.

Remaking an equalizer curve

The equalizer curve becomes flat. You can now remake the equalizer curve from the beginning using the FREQUENCY 1-3 buttons and the DIGITAL CONTROLLER.

Reversing an equalizer curve

If you reverse the equalizer curve, you can hear sound adjusted with a pattern exactly the reverse of that of the original curve.

Press again and the curve reverts to its original shape. When recording a program source, if you pre-adjust the equalizer curve so as to raise the level of the high frequency sound before recording, and then reverse the curve during playback by pressing the REVERSE button, you can reduce high frequency noise.

Using the Digital Presence Surround Effects

To vary the level of the reverberated sound

To confirm the surround effect

The sound is switched between the pre-adjustment settings and the adjusted settings, allowing you to hear and compare the difference.

When you do not want to apply the surround effect Press so that the OFF indicator lights.

Typical speaker system layout

The example illustrated below is a typical speaker system layout. Vary the positioning and direction of the surround speakers to suit your listening environment and individual taste.

Note:

Even if the Digital Presence Surround selector is set to the OFF position, sound is output from the surround speakers. By connecting optionally available surround speakers to the surround speaker jacks, the sound field will be expanded to 360 degrees, enabling you to enjoy full-fledged surround sound.

Using the Digital Presence Surround Effects

By using this system's various surround effects, you can create a feeling of presence similar to being in a concert hall or movie theater.

MUSIC	Switches to the music program
MOVIE	Switches to the movie program
SIMULATED	Gives monaural sources a stereo effect

Readjusting the surround effect

The surround function allows you to adjust the length of the reverberation time and the level of the reverberated sound, putting you in control of a wide range of effects and sounds. The surround effect adjustments should usually be set to match the size of the envisaged concert hall. When you want to create the atmosphere of a small hall such as a live house or club, shorten the reverberation time. When you want to create the atmosphere of a large hall such as a concert hall, lengthen the reverberation time. If you want to add the feeling of being in a "live" hall where there is a lot of echo, increase the level (strength) of the reverberated sound. If you want to add the feeling of being in a "dead" hall where there is little echo, decrease the level of the reverberated sound.

To vary the reverberation time

Providing Low-Volume Sound with a Feeling of Power

- Digital Dynamic Sound

Use the Digital Dynamic Sound function.

Although this function can be enjoyed at normal volume levels, it is especially effective for making low volume sound more powerful.

Also, since this function has the effect of making low-volume sound easier to hear over external noise, it is effective for use when recording tapes meant for playing in a Walkman or car stereo.

Position	Strength of the Digital Dynamic Sound effect
HIGH	Strong
MIDDLE	Medium
LOW	Weak
OFF	Not applied

To confirm the dynamic sound effect

The sound is switched between the pre-adjustment settings and the adjusted settings, allowing you to hear and compare the difference.

When the DIGITAL EFFECT switch is OFF (when the indicator is extinguished), the equalizer, surround, and dynamic sound functions can be operated. But the sound you hear does not change. The DIGITAL EFFECT switch must be ON for the adjusted sound to be heard.

Digital Sound Menu

See "Using the Digital Sound Menu Settings to Adjust the Sound" for operation.
To handle different sound types and program sources, 200 different combinations of equalizer, surround and dynamic sound settings can be obtained.

10 specially recommended settings (SELECT 10) are stored in the user memory and indicated on the diagram.
Use this diagram to name and write down your personal sound settings.

SELECT 10 user memory

- 1 Large hall: Gives the atmosphere of a large hall which seats more than 2000 people.
- 2 Recital hall: Gives the atmosphere of a hall which seats less than 1000 people.
- 3 Orchestra: For a music such as classical music which is full of reverberation sound.
- 4 Movie surround: For a video program which is recorded with surround.
- 5 Simulated: Gives width to a monaural program source.

- 6 Jazz club: Gives an atmosphere similar to a jazz club in which the sound is heard brightly and heavily.
- 7 Gym: Gives an atmosphere similar to a gym.
- 8 Walkman: For recording a tape to be listened to with a stereo headphones.
- 9 BGM: For enjoyment of sound at low listening levels.
- 10 Disco: Gives a sound similar to a disco which has firm floors and walls.

Using the Digital Sound Menu Settings to Adjust the Sound

This unit has a memory containing 10 different preset equalizer settings (0 - 9) and 20 different preset surround and dynamic sound settings (0 - 19) (Digital Sound Menu) for handling different sound types and program sources. This function enables you to choose from 200 (10 × 20) different

equalizer and surround/dynamic sound combinations to set the sound quality to suit your taste and listening conditions. Adjust the sound to fit your taste. See "Digital Sound Menu" on the previous two pages for the contents of the Digital Sound Menu.

Storing Your Individual Sound Effect Settings - User Memory

By storing your individual sound effect settings or the digital sound menu settings in the user memory, you can easily call up the settings at any desired time. You can store up to 10 combinations of settings in the user memory.

When the system is shipped from the factory, 10 specially recommended settings (SELECT 10) from the digital sound menu are stored in the user memory.

Calling Up the Sound Menu Settings

1 Press the **PRESET CALL** button.

The **Surround/Dynamic Sound Number** (0 - 19) and the **Equalizer Number** (0 - 9) are displayed on the **DIGITAL CONTROLLER**.

2 Call up the equalizer number (0 - 9).

Press the **Equalizer Number** button on the **DIGITAL CONTROLLER**.

3 Call up the surround/dynamic sound number (0 - 19).

Press the **Surround/Dynamic Sound Number** button on the **DIGITAL CONTROLLER**.

1 Obtain the desired sound effect. (See pages 53 - 57 or 60.)

2 Press the **MEMORY** button.

3 While the **MEMORY** indicator is blinking, press the **USER MEMORY** button (0 - 9).

At step 2:
The displayed equalizer curve, surround, and dynamic sound settings are stored in the user memory under the pressed button, and the number of the user memory location appears on the display. The settings previously stored at this memory location are erased and replaced by the new settings.

Calling up settings from user memory

Press the button corresponding to the number you wish to recall.

Storing Your Individual Sound Effect Settings – User Memory

Making use of the Digital Sound Menu to generate settings for storing in user memory

- 1 Call up the Digital Sound Menu settings you wish to utilize (page 60).
- 2 Modify the equalizer curve (page 53) and/or the surround/dynamic sound (page 55) to match your taste.
- 3 Store the modified settings in the user memory by following the procedure listed under "Storing Your Individual Sound Effect Settings-User Memory".

The utilized preset memory settings remain stored in preset memory in their original condition.

Storing Digital Sound Menu settings in user memory

- 1 Call up the Digital Sound Menu you wish to store in user memory. (page 60)
- 2 Store the settings in the user memory.

How do I restore the contents of the user memory to the initial (SELECT 10) settings?

- 1 Turn on the power.
- 2 Press the CLEAR button before the volume indicator stops blinking.

"M COPY" is displayed and the initial 10 sound menu settings are stored in user memory.

Erasing adjustments with a single touch of a button

"OK?" appears on the display.

- 2 Press the CLEAR button again and hold it depressed until "CLEAR" is displayed.

All settings, including the FREQUENCY 1 – 3 positions and the surround reverberation time and level, return to their initial (factory) values. However, the settings stored in user memory remain as they were prior to the clear operation.

Microphone Mixing

This function allows you to use a microphone to sing along or "mix" your voice with a music source such as a compact disc.

To record the mixed sound

- 1 Load a recording tape into deck B.
- 2 Press the EQUALIZER RECORDING button.*
- 3 Start recording on deck B (see "Recording" on page 38.)

* It is not possible to adjust the microphone sound using the Digital Parametric Equalizer, the Digital Dynamic Sound, or the Digital Presence Surround.

If howling occurs

Turn the MIC LEVEL counterclockwise or separate the microphone away from the speakers.

When the microphone is not being used

Be sure to unplug the microphone from the MIC jack and set the MIC LEVEL control to the MIN position when the microphone is not being used.

Combining Video Images with Sounds from Other Sources and Performing Video Editing

While viewing a video on a VTR connected to this system, you can listen to music from another source such as a CD player or tape deck. You can also record a video image with the sound from another audio source. For example, this

function enables you to edit a home-made video by recording music you like as the video's background music. The editing possibilities are limited only by your imagination.

To record the selected video and audio signals

Start recording on the VTR connected to the VIDEO 1 jacks. For details on how to operate connected components, refer to the components' instruction manuals.

To dub a videotape

- 1 Select the VIDEO 2 or VIDEO 3.
- 2 Start playing the VTR connected to the VIDEO 2/DAT or VIDEO 3/CD jacks.
- 3 Start recording on the VTR connected to the VIDEO 1 jacks.

Note

The only VTR that can be used for recording is the VTR connected to the VIDEO 1 jacks. The VTRs connected to the VIDEO 2/DAT or VIDEO 3/CD jacks cannot be used for recording even if they are operated so as to begin recording.

SECTION 2 DISASSEMBLY

NOTE: Follow the disassembly procedure in the numerical order given.

INSPECTION OF THE DIGITAL BOARD

© IC301 (CXD1240) for digital signal input

This IC selects the digital audio input signal, transmits the format information for the input signal to the system microcomputer, or sends the clock signal to any peripheral devices.

Pin No.	Pin Name	I/O	Function
1	GD		Digital GND
2	UREC	I	Background-recording mode. Low when active.
3	DIAN	I	Selects ADDT output. ANDT when low. RX when high.
4	S1	I	RX input select 1
5	S2	I	RX input select 2. RX input is selected using S1 and S2. RX1 is selected when S1S2 are 00, RX2 is selected when they are 01, RX3 is selected when they are 10, or OFF is selected when they are 11.
6	GA		Analog GND
7	R1		CR for VCO
8	VCOI	I	VCO input
9	R2		CR for VCO
10	C1		CR for VCO
11	C2		CR for VCO
12	VCOO	I/O	
13	PHCO	O	Phase comparator output
14	PLREF	I/O	
15	PLVAR	I/O	
16	VA		Analog 5V power supply
17	DRECO	O(10mA)	RX direct output
18	RX1	I	RX input 1
19	RX2	I	RX input 2
20	RX3	I	RX input 3
21	VD		Digital 5V power supply
22	TS1	I	Test select 1. Normally set to 0.
23	TS2	I	Test select 2. Normally set to 0.
24	XCLR	I	Reset input. Active when low.
25	RECO	O	Audio data output 2
26	ADDT	O	Audio data output 1
27	LRCK	O	LR clock. 1FS
28	BCK	O	Bit clock. 64FS
29	MCK	O	Master clock. 384FS
30	ANDT	I	Audio data from the A/D converter
31	GD		Digital GND
32	XTLO	O	XTL output
33	XTLI	I	XTL input
34	XTLON	O	XTL oscillation control. Connected to XTLI.
35	MUTE	O	ADDT mute signal
36	RECM	O	RECO mute signal
37	FS1	O	FS information 1
38	FS2	O	FS information 2. FS information is determined by the values of FS1 and FS2. the FS information is 44.1 kHz when FS1 is 0 and FS2 is 0, 48.0 kHz when FS1 is combined 0 and FS2 is 1 or 32.0 kHz when FS1 is 1 and FS2 is 1.
39	EMP	O	EMPHASIS information. EMPHASIS ON when set to 1. EMPHASIS OFF wh
40	VD		Digital 5V power supply

© LSI IC405 (CXD1160P) and IC406 for digital audio signal processing
This LSI is a digital audio signal processing LSI which includes instruction RAM, factor RAM, data RAM, multiplier, and level shifter; serial I/O and delay I/O (Max: Stereo 1024 sample delay) when used for peripheral devices; and a microcomputer interface circuit.

Pin No.	Pin Name	I/O	Function
1	SDT	I	Serial data input receiving instruction, factor, and I/O control transmissions from the microcomputer
2	SCK	I	Serial clock input for SDT. Inputs data at leading edge.
3	XSLD	I	Latch signal input from system microcomputer to latch the serial data in IC. Active when low. (LCK for DPAC1)
4	SI02	I	Input to set the clock number for the serial bit clock BCK contained in sampling time data for CH-1 or CH-2. 32 bit clock mode when connected to GND, 24 bit clock mode when connected to +5V. (This unit is 32 bit machine.)
5	DYSL	I	Mode select input of delay I/O. When it is connected to GND, serial mode is set and the operation is the same as serial I/O. When it is connected to +5V, delay mode is entered and DYSL is connected to the external DRAM (64 Kbit) and is configured as a two-channel delay line.
6	TST	I	Used for test. Normally connected to GND.
7	VSS		GND
8	MCK1		Master clock input 1. The frequency of the ACK signal of the master clock inside the IC is divided in half. When the master clock signal is input through MCK1, MCK2 is connected to +5V.
9	MCK2	I	Master clock input 2. The frequency of the ACK signal of the master master clock inside the IC is as same as this terminal. When the master clock signal is input through MCK2, MCK1 is connected to +5V or GND.
10	SI	I	Serial data input of one sampling for two channels
11	SO	O	Serial data output of one sampling for two channels
12	BCK	I	Serial bit clock input for SI and SO. Serial input data is received at the leading edge of BCK and serial output data is transmitted at the trailing edge. (64FS)
13	LRCK	I	I/O FS clock input (1FS)
14	XOVF	O	Adder/subtractor overflow detection output. low when the overflow is detected.
15	A6	O	External DRAM address output A6
16	A3	O	External DRAM address output A3
17	A4	O	External DRAM address output A4
18	A5	O	External DRAM address output A5
19	A7	O	External DRAM address output A7
20	XCLR	I	Used for test. Normally connected to +5V.
21	VDD	—	+5V power supply
22	A1	O	External DRAM address output A1
23	A2	O	External DRAM address output A2
24	A0	O	External DRAM address output A0
25	XRAS	O	Low address strobe output for external DRAM
26	XWSO	O	Serial data output when DYSL is low. Operation corresponds to mode of serial I/O. Write enable output for external DRAM when DYSL is high.
27	DIO	I/O	Serial data input when DYSL is low. Data is input according to the mode of serial I/O. Data I/O for external DRAM and is the common line for DRAM data input Din and data output Dout when DYSL is high.
28	XCAS	O	Column address strobe output for external DRAM

© System control microcomputer IC501 (HD-63B01YOP) (8 bit, 16K ROM, 256 RAM)
This IC controls all the peripheral devices other than the display. A latch clock (LCK), a bit clock (BCK), and data (serial) are sent when each device is addressed. The BCK is also output to the two microcomputers of the display block so as to send data as required.

Pin No.	Pin Name	I/O	Function															
1	Vss		GND potential

© Display control microcomputer IC614 (μ PD78C11)(internal 8-bit analog-to-digital converter)

- A/D conversion for spectrum analyzer
Using an internal 8-bit A/D converter, the 11-channel analog signal for a spectrum analyzer is A/D-converted and compressed in logarithm, then sent to the display microcomputer and IC613 as 5-bit parallel data. The analog data is loaded by time-shifting 12 channels (BPF(11) + analog GND (1)) 6 channels at a time and sampling them.
- Fluorescent indicator display
The data (8×14 bits) received from the main microcomputer is synchronized with IC613 for dynamic display (9 SEG × 7 DIG).
- LED display
The data (8×5 bits) received from the main microcomputer is synchronized with IC613 for dynamic display (7 SEG × 7 DIG).

3-5. SCHEMATIC DIAGRAM — ANALOG SECTION —

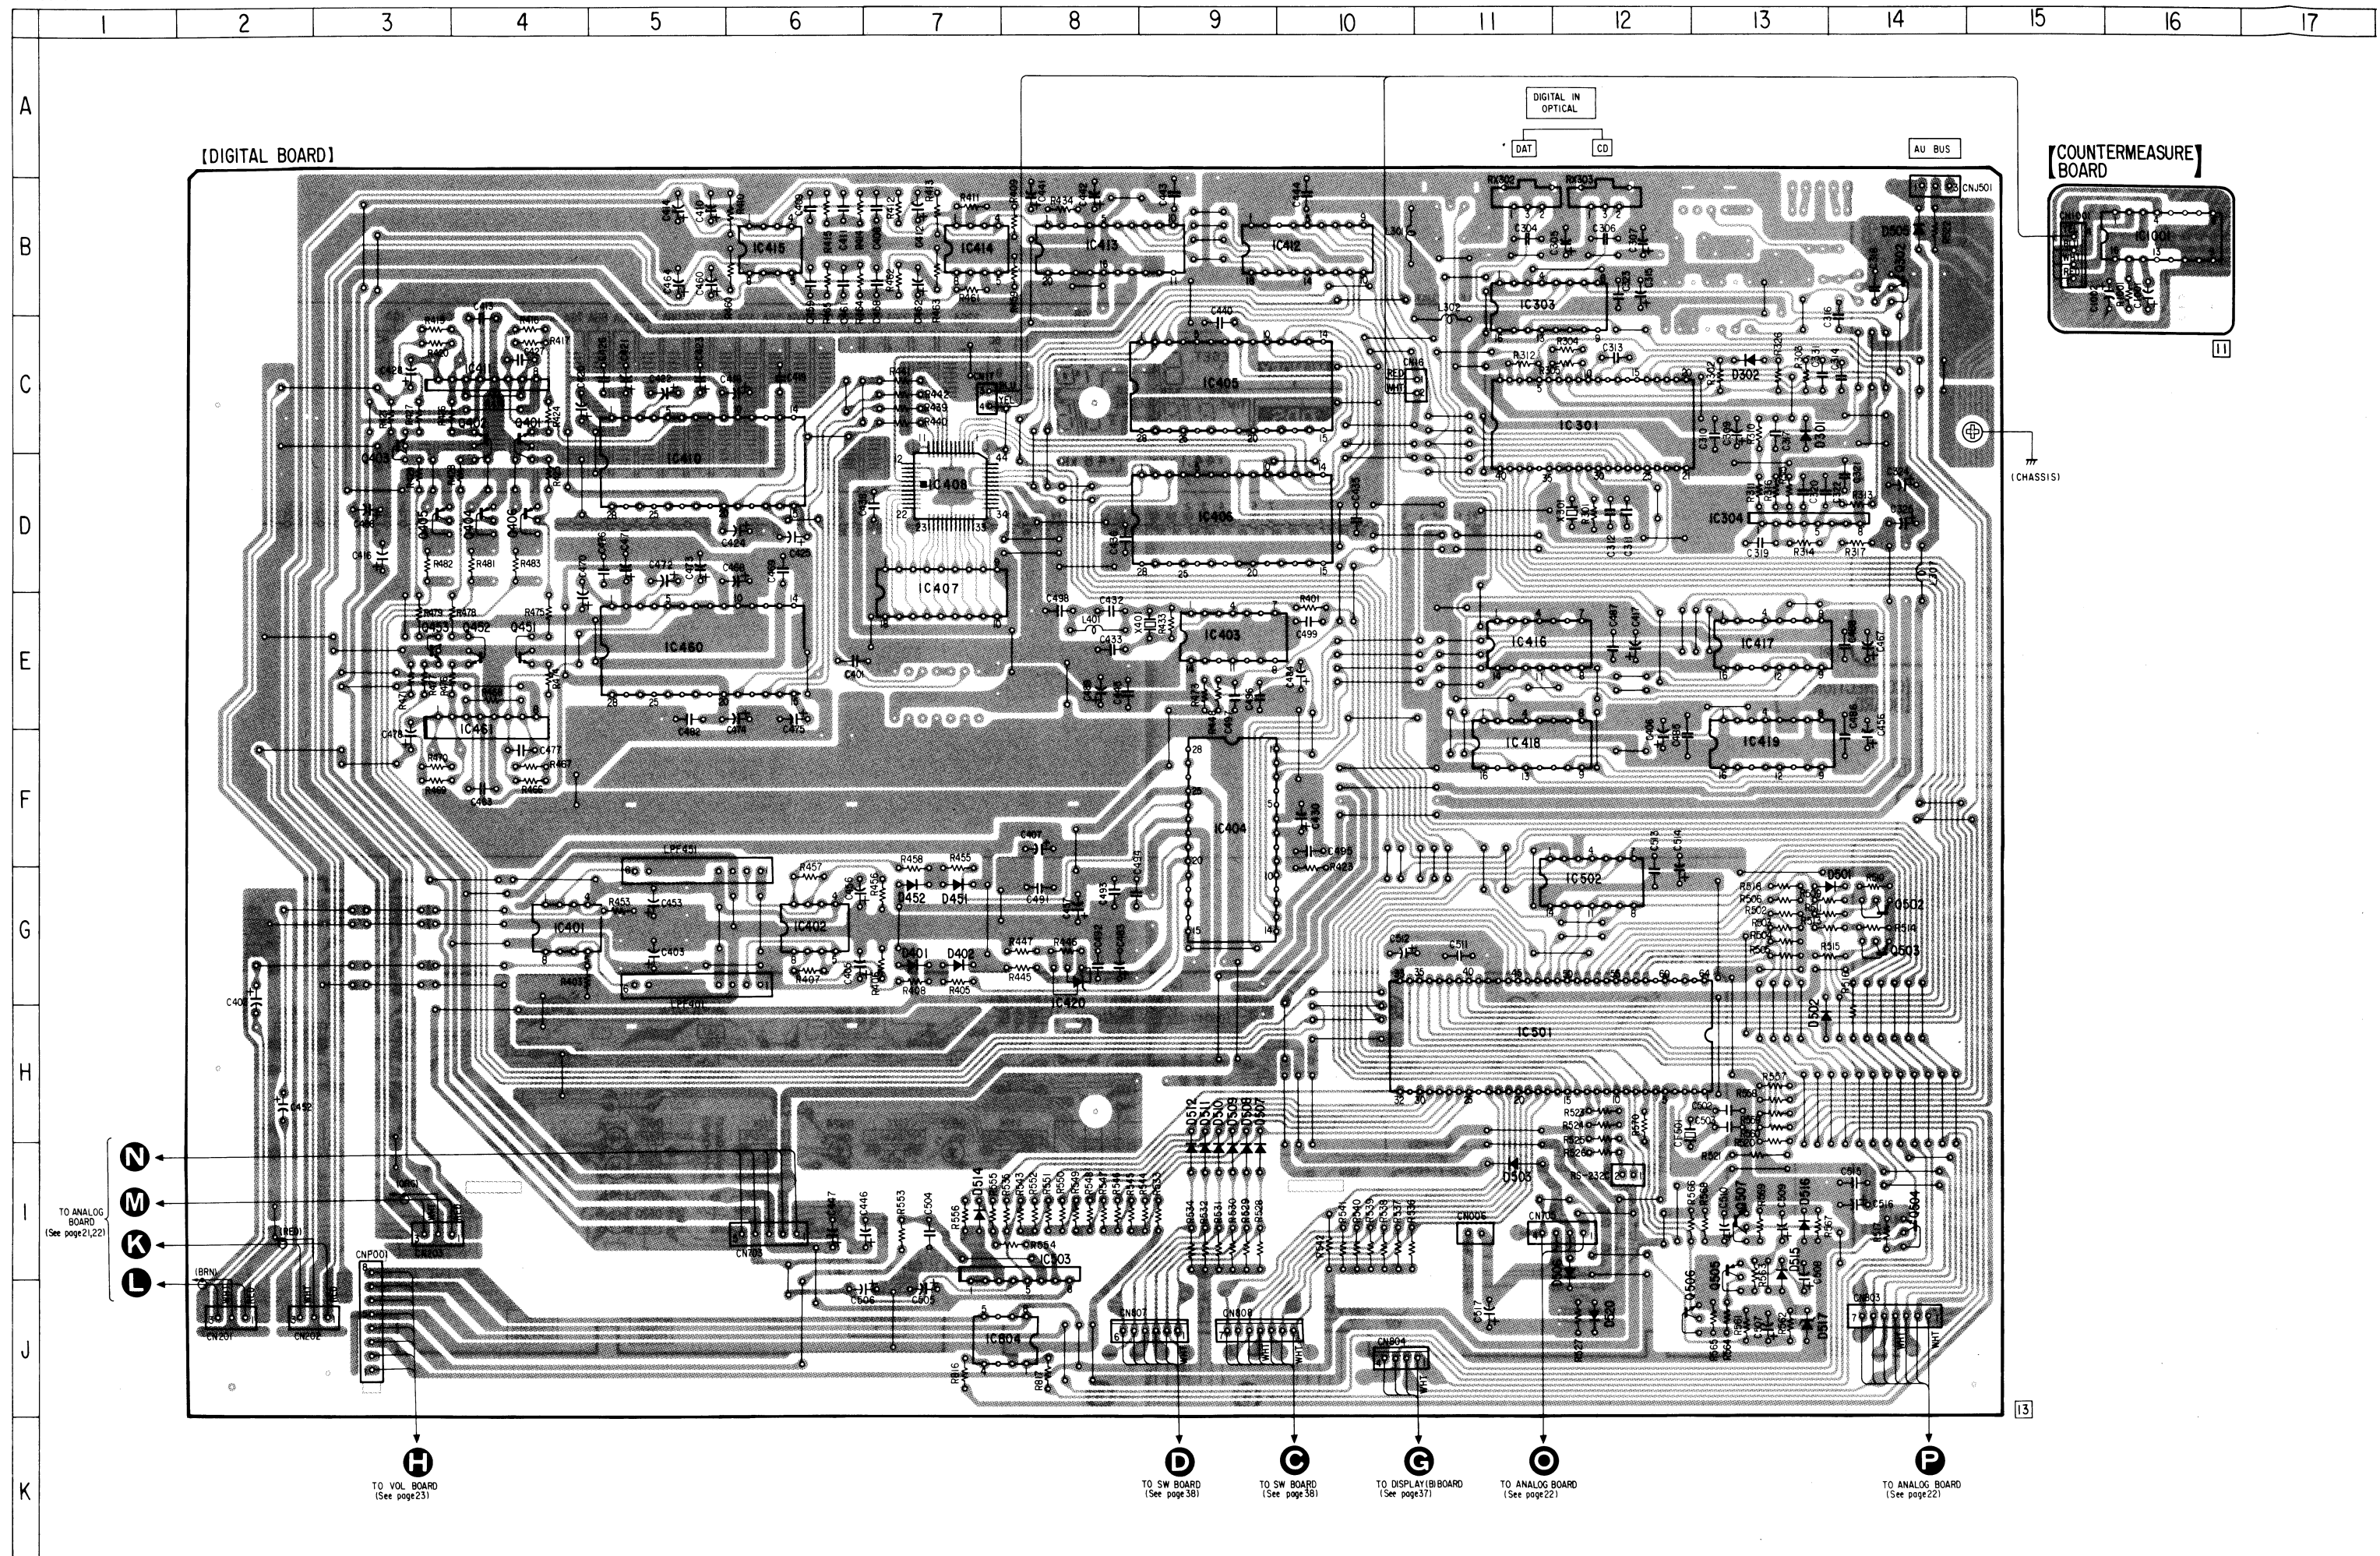

Note:

- All capacitors are in μF unless otherwise noted. pF : μF 50WV or less are not indicated except for electrolytics and tantalums.
- All resistors are in Ω and $\frac{1}{4}\text{W}$ or less unless otherwise specified.
- : fusible resistor.
- : B+ Line
- : B- Line
- Voltage and waveforms are dc with respect to ground under no-signal conditions.
no mark: PHONO
- Voltages are taken with a VOM (input impedance 10M Ω).
Voltage variations may be noted due to normal production tolerances.
- Signal path.
 : PHONO
- Switch

SECTION 4 EXPLODED VIEWS

NOTE:

- The mechanical parts with no reference number in the exploded views are not supplied.
- The construction parts of an assembled part are indicated with a collation number in the remark column.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

- Due to standardization, parts with part number suffix -XX and -X may be different from the parts specified in the components used on the set.
- Color Indication of Appearance Parts
Example:
(RED) ... KNOB, BALANCE (WHITE)
↑ Cabinet's Color ↑ Parts Color

The components identified by mark  or dotted line with mark  are critical for safety. Replace only with part number specified.

SECTION 5
ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:
MF: μ F, PF: μ F.

RESISTORS
• All resistors are in ohms.
• F: nonflammable

COILS
• MMH: mH, UH: μ H

SEMICONDUCTORS
In each case, U: μ , for example:
UA...: μ A..., UPA...: μ PA...,
UPC...: μ PC, UPD...: μ PD...

The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

TA-V925NE

SERVICE MANUAL

AEP Model
UK Model

This set is the Stereo Power
amplifier section in
LBT-V925CD

SPECIFICATIONS

Power amplifier

Power output	85 W + 85 W at 5 % distortion
Power consumption	150 W
AC outlets	2 unswitched. 200 W max.
Dimensions	355 × 132 × 335 mm (w/h/d) (14 × 5 ¹ / ₅ × 13 ¹ / ₈ inches)
Weight	Approx. 6.7 kg (14 lb 13 oz)

General

Power requirements 240 V AC, 50 Hz

Design and specifications subject to change without notice.

STEREO POWER AMPLIFIER
SONY®

MODEL IDENTIFICATION

— Specification Label —

AEP, Italian Model : AC : 220V~50/60Hz 150W
 UK Model : AC : 240V~50/60Hz 150W

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK  OR DOTTED LINE WITH MARK  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

SECTION 1 GENERAL

Parts Identification

Power amplifier

- 27 POWER switch
- 28 PEAK POWER METER
- 29 METER RANGE selector
- 30 OPERATION indicator
- 31 SPEAKERS selector
- 32 HEADPHONES jack (stereo phone jack)

SECTION 2 DISASSEMBLY

Note : Follow the disassembly procedure in the numerical order given.

[FRONT PANEL]

SECTION 3 ELECTRICAL ADJUSTMENTS

[DC Bias Adjustment]

Perform this adjustment when replacing the transistors or ICs of the power amplifier.

Setup :

- No signal (No load)
- Minimum volume

Procedure :

1. Connect DC volt meter to the TP.
2. Turn on the power and wait for 3 minutes, then adjust RT101 (L-CH) and RT151 (R-CH) so that the bias voltage becomes 7mV.

Adjustment Location :

4-3. PRINTED WIRING BOARDS

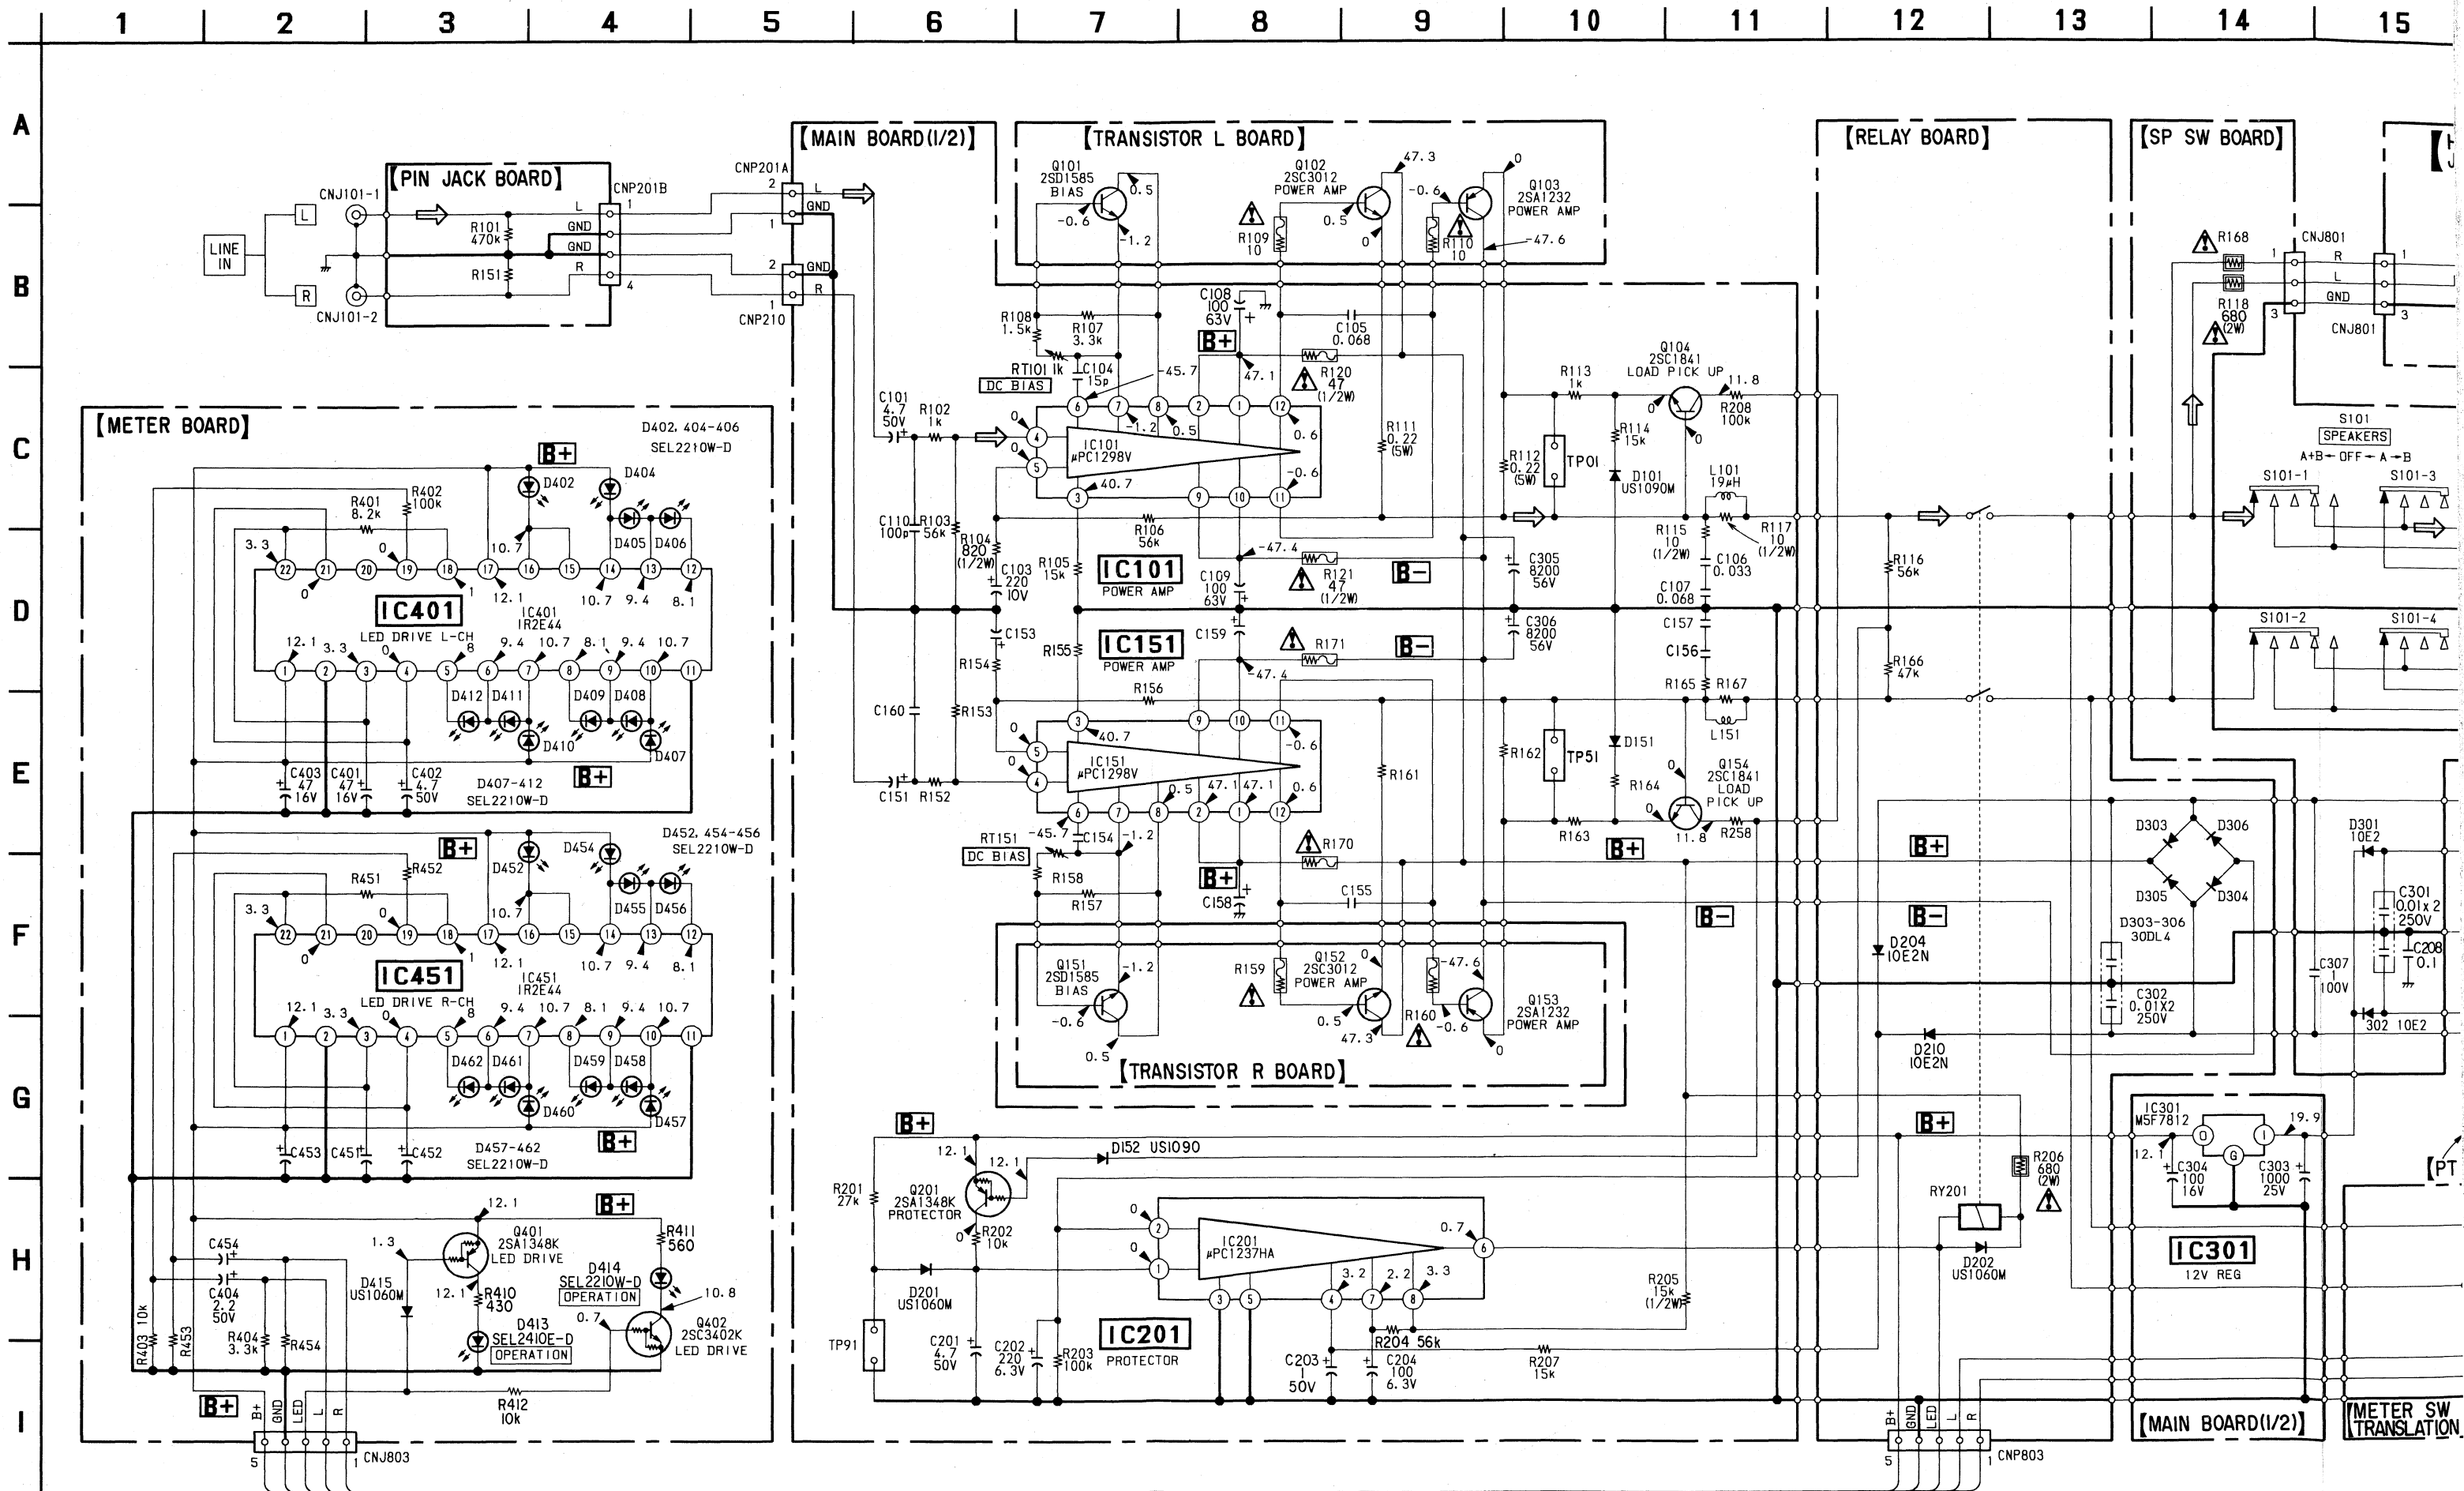

• Refer to page 6 Semiconductor Lead Layouts.

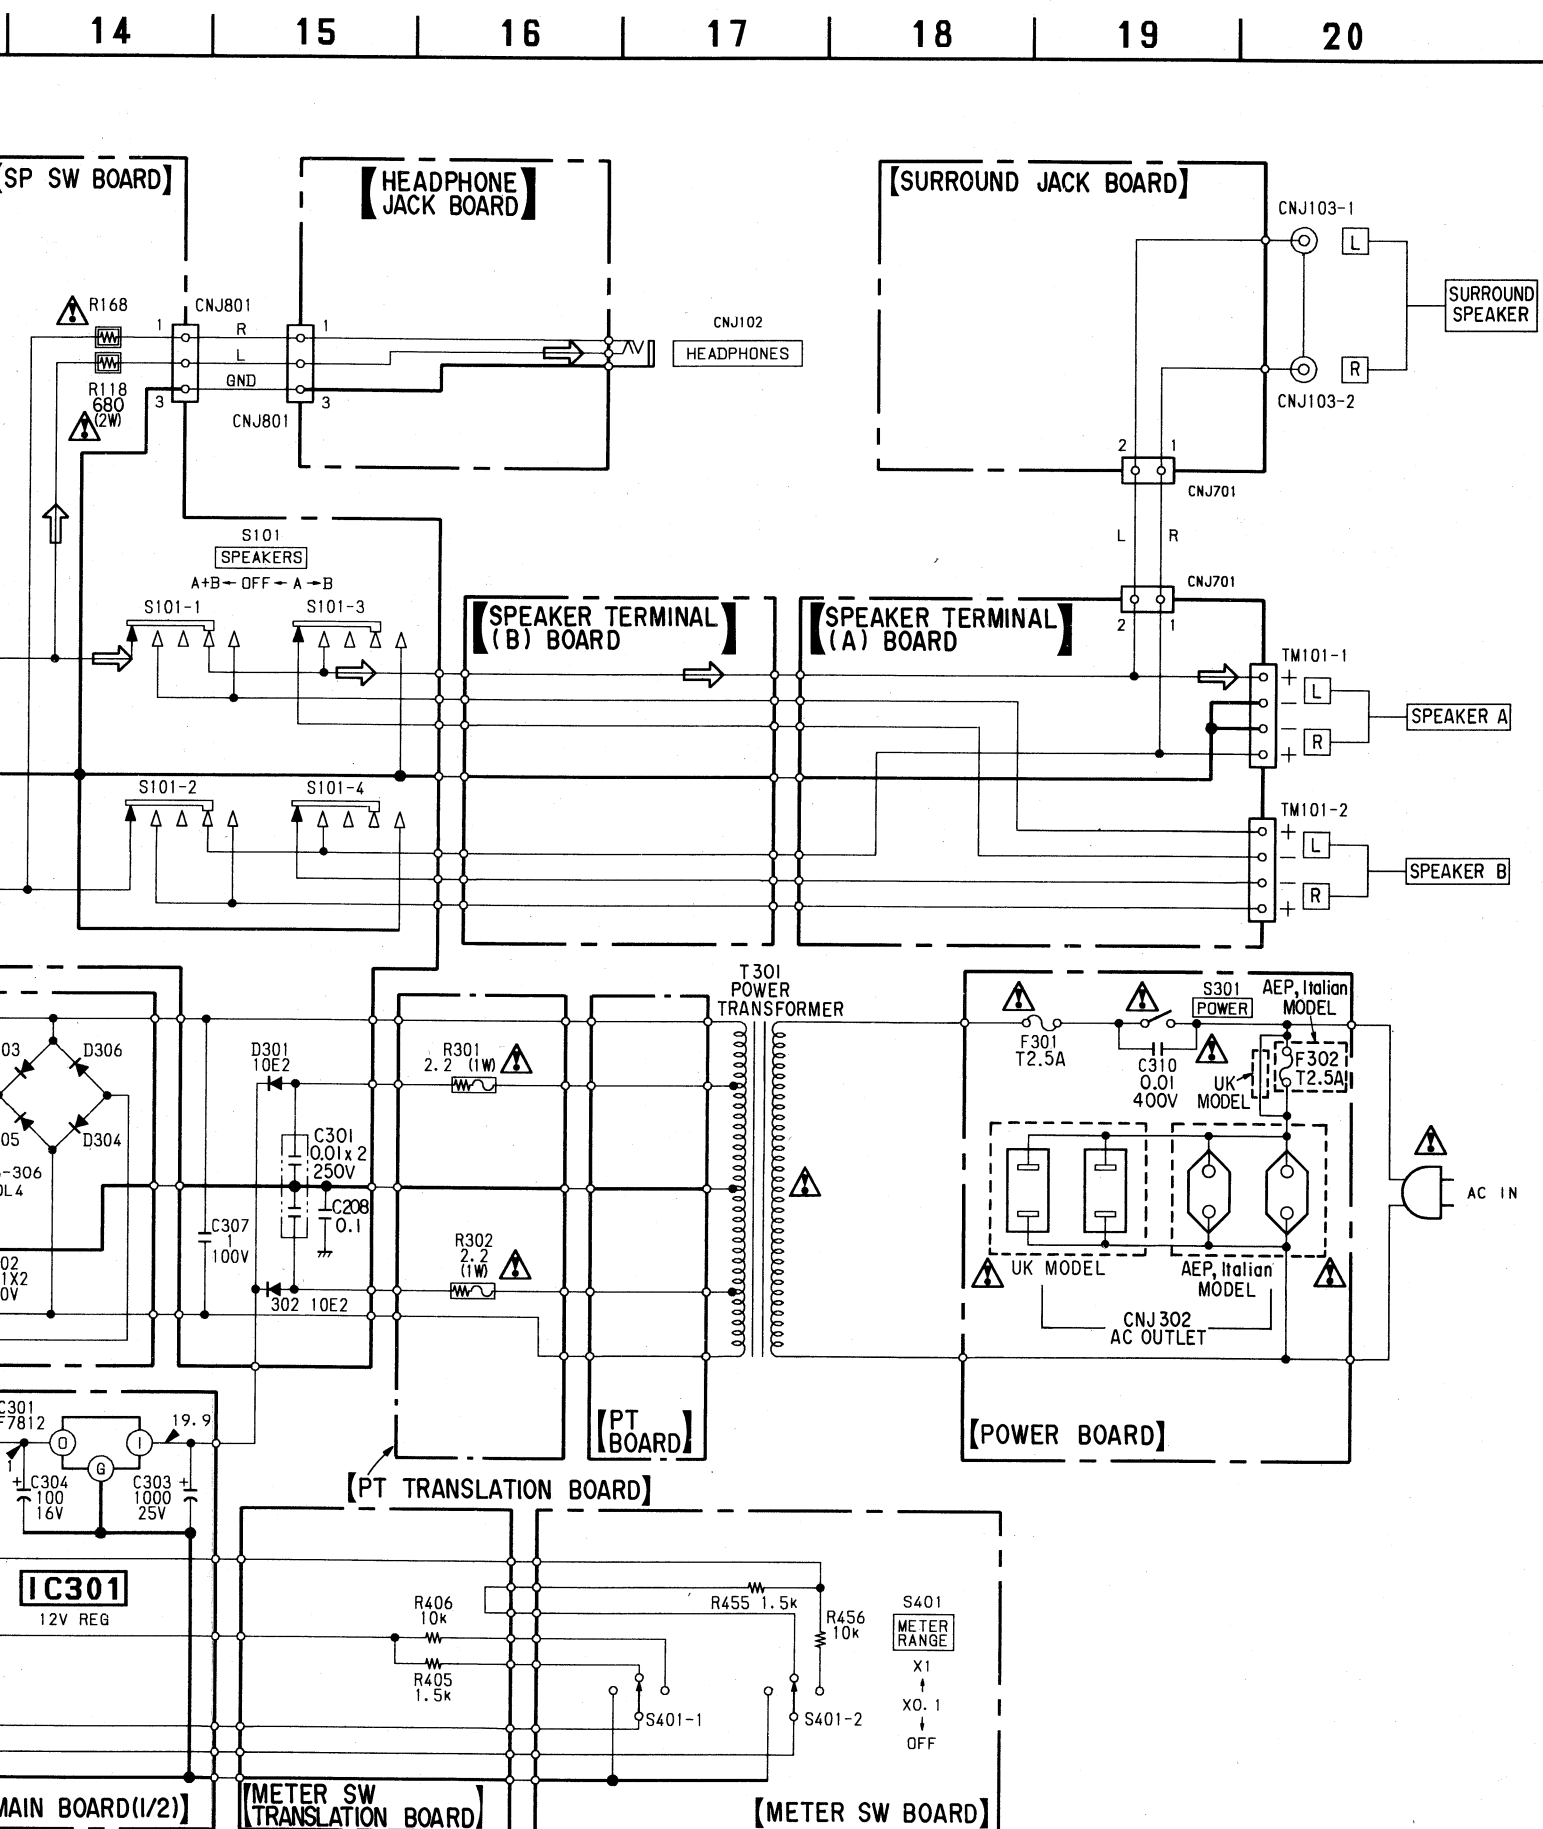

Note:
• —○—: parts extracted from the component side.

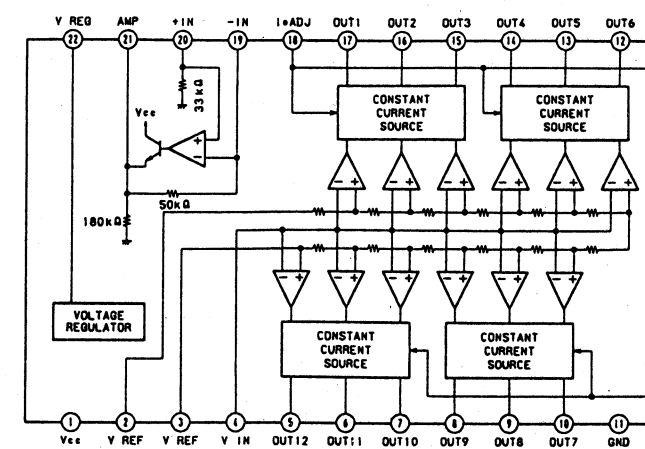

4.4. SCHEMATIC DIAGRAM

• IC BLOCK DIAGRAM

Note:

- All capacitors are in μF unless otherwise noted. pF: $\mu \mu F$
- 50WV or less are not indicated except for electrolytics and tantalums.
- All resistors are in Ω and $\frac{1}{4}W$ or less unless otherwise specified.
- Components for right channel have same values as for left channel. Reference numbers are coded from
- \square : nonflammable resistor.
- \square : fusible resistor.
- \square : B+ Line
- \square : B- Line
- \square : adjustment for repair.
- Voltage and waveforms are dc with respect to ground under no-signal conditions.
- Voltages are taken with a VOM (input impedance 10M Ω). Voltage variations may be noted due to normal production tolerances.
- Signal path.
- \Rightarrow : LINE

SECTION 5

EXPLODED VIEW

NOTE:

- The mechanical parts with no reference number in the exploded views are not supplied.
- The construction parts of an assembled part are indicated with a collation number in the remark column.
- Items marked “★” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

- Due to standardization, parts with part number suffix -XX and -X may be different from the parts specified in the components used on the set.
- Color Indication of Appearance Parts
Example:
(RED) ... KNOB, BALANCE (WHITE)

SECTION 6 ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:

MF: μ F, PF: μ F.

RESISTORS

- All resistors are in ohms.
- F: nonflammable

COILS

- MMH: mH, UH: μ H

SEMICONDUCTORS

In each case, U: μ , for example:
UA....: μ A...., UPA....: μ PA....,
UPC....: μ PC, UPD....: μ PD....

The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

TC-V925E

SERVICE MANUAL

*AEP Model
UK Model*

TC-V925E is the
cassette deck
section in LBT-V925CD.

Model Name Using Similar Mechanism		TC-V901
Tape Transport Mechanism Type	DECK A	TCM-170RA4
	DECK B	TCM-170RB10

SPECIFICATIONS

Recording system	4-track, 2-channel stereo
Frequency response	DOLBY NR OFF (DIN) With TYPE IV cassette (SONY METAL-ES) 30 to 15,000 Hz ± 3 dB With TYPE II cassette (Sony UX-S) 30 to 14,000 Hz ± 3 dB With TYPE I cassette (Sony HF-S) 30 to 13,000 Hz ± 3 dB
Wow and flutter	± 0.2 % (DIN)
AC outlet	1 unswitched, max. 100 W
Dimensions	355 \times 133 \times 308 mm (w/h/d) (14 \times 5 $\frac{1}{4}$ \times 12 $\frac{1}{8}$ inches) Incl. projecting parts and controls
Weight	Approx. 4.6 kg (10 lb 3 oz)

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK OR DOTTED LINE WITH MARK ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

SECTION 2 DISASSEMBLY

Note: Follow the disassembly procedure in the numerical order given.

Unscrew the four case attachment screws M3×8 and remove the upper case.

MAIN BOARD

- 1 Press the eject button and remove the cassette lid by sliding it upward.
- 2 Remove the front panel assembly (incl. MD part). Remove the connector and printed circuit board holder from the MD board, and remove the connector board and HXPRO board.
- 3 Remove the connectors of the main board. (CN12 and CN82 are connected to the MD board, CN11 is connected to the leaf SW board.)
- 4 Unscrew four MD attachment screws B2.6×8.
- 5 Remove the cassette holder assembly, and the cassette holding plate in that order.

MOTOR Ass'y

HEAD Ass'y

SECTION 3 ADJUSTMENTS

3-1. MECHANICAL ADJUSTMENT

PRECAUTION

- Clean the following parts with a denatured-alcohol-moistened swab:
record/playback head pinch roller
erase head rubber belts
capstan idler
- Demagnetize the record/playback head with a head demagnetizer.
- Do not use a magnetized screwdriver for the adjustments.
- The adjustments should be performed in the rated power supply voltage unless otherwise noted.

Torque Measurement

Torque	Torque Meter	Meter Reading
FWD	CQ-102C	27 to 75 g*cm (0.38 to 1.04 oz*inch)
FWD Back Tension	CQ-102C	1 to 10 g*cm (0.014 to 0.13 oz*inch)
REV	CQ-102RC	27 to 75 g*cm (0.38 to 1.04 oz*inch)
REV Back Tension	CQ-102RC	1 to 10 g*cm (0.014 to 0.13 oz*inch)
FF, REW	CQ-201B	95 to 165 g*cm (1.33 to 2.29 oz*inch)

3-2. ELECTRICAL ADJUSTMENTS

Note: The adjustment should be performed in the order given in the service manual. As a rule, adjustment about playback should be performed before adjustment about recording.

The adjustments should be performed for both L-CH and R-CH.

- Switches and controls should be set as follows unless otherwise specified.

DOLBY NR switch : OFF

DIRECTION MODE switch : \Rightarrow

- Standard Record:

Deliver the standard input signal level to the input jack and set the REC LEVEL control to obtain the standard output signal level.

— Record Mode —

• Standard Input Level

input terminal	LINE IN
source impedance	10 kΩ
input level	0.25 V (- 10 dB)

• Standard Output Level

output terminal	LINE OUT
load impedance	47 kΩ
output level	0.44 V (- 5 dB)

• Test tape

Type	Signal	User for
P-4-A100	10 kHz, - 10 dB	Azimuth Adjustment
P-4-L300	315 Hz, 0 dB	PB Level Adjustment
WS-48B	3 kHz, 0 dB	Tape Speed Adjustment

Record/Playback Head Azimuth Adjustment

DECK A DECK B

Procedure:

- Mode: FWD playback

- Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw until both of output levels match together within 1dB.

- Phase Check
Mode: playback

- Set in the REV mode and repeat the step 1 - 3.
- After the adjustment, lock the screws with locking compound.

Adjustment Location: record/playback head

Tape Speed Adjustment DECK A DECK B

Perform high speed adjustment before normal speed adjustment.

Procedure:

Mode: FWD playback

[High Speed Adjustment]

- Short test pin TP1 on main board.
- Put the set to FWD playback state.
- Press and keep on pressing HIGH SPEED DUBBING switch (S802 on FL board).
- On this time, adjust with the semi-fixed variable resistors (H) on the rear side of M901A (Deck A) and M901B (Deck B) so that the reading on the frequency counter becomes the adjust-ment limits.
- After adjustment, release the short on TP1.

[Normal Speed Adjustment]

- Put the set to FWD playback state.
- On this time, adjust with the semi-fixed variable resistors (L) on the rear side of M901A (Deck A) and M901B (Deck B) so that the reading on the frequency counter becomes the adjust-ment limits.

Adjustment Limits:

Speed	Frequency Counter
high	5,960 ± 60 Hz
normal	2,980 ± 30 Hz

Frequency difference between the beginning and the end of the tape should be within 3%.

Frequency difference between Deck A and Deck B the beginning of the tape should be within 1.5%.

Adjustment Location:

Deck A: motor (M901A) rear side
Deck B: motor (M901B) rear side

• Test Mode

When making pin ③ of IC803 low (connect TP1 to ground with jumper wire), following function operates.

- Source monitor
Release the line mute while recording.
- High speed playback
On playing back, while pressing HIGH SPEED (DUBBING) button, high speed playback operates.
- Record memory stop
Using DIRECTION MODE switch \rightleftarrows , returns to the recording start point and stops or plays.
- LED indication of slide switch
When making Deck B pause, LED indicates the positions of DIRECTION MODE switch and (AUTO CD SYNCRO) MODE switch.

Switch	Position	LED
DIRECTION MODE	\rightleftarrows	Deck A ◀ Deck A PLAY Deck A ▶
	RELAY	
MODE	NORM	Deck B ◀
	FADE ERASE	Deck B PLAY Deck B ▶

- AGC gain check
When setting DIRECTION MODE switch to \rightleftarrows and recording, AGC gain becomes maximum.

Note on Schematic Diagram:

- All capacitors are in μF unless otherwise noted. pF : $\mu\mu\text{F}$ 50 WV or less are not indicated except for electrolytics and tantalums.
- All resistors are in Ω and $\frac{1}{4}$ W or less unless otherwise specified.
- Components for right channel have same values as for left channel. Reference numbers are coded from
- \triangle : internal component.
- $\text{---}\text{---}\text{---}$: fusible resistor.

Note: The components identified by mark \triangle or dotted line with mark \triangle are critical for safety. Replace only with part number specified.

- $\text{B}+$: B + Line.
- $\text{B}-$: B - Line.
- \square : adjustment for repair.
- Voltages and waveforms are dc with respect to ground under no-signal conditions.
no mark: STOP
(): Normal speed dubbing
((): High speed dubbing
 \blacktriangleright : FWD \blacktriangleleft : REV \blacksquare : STOP
 $\blacktriangleright\blacktriangleright$: FF $\blacktriangleleft\blacktriangleleft$: REW \bullet : REC
- Voltages are taken with a VOM (input impedance 10 M Ω). Voltage variations may be noted due to normal production tolerances.

SECTION 6

ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- Items marked "★" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:MF: μ F, PF: μ F.**RESISTORS**

- All resistors are in ohms.
- F: nonflammable

COILS

- MMH: mH, UH: μ H

SEMICONDUCTORSIn each case, U: μ , for example:UA....: μ A...., UPA....: μ PA....,UPC....: μ PC, UPD....: μ PD...

The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

SERVICE MANUAL

AEP Model
UK Model

SPECIFICATIONS

Tuner

Circuit system FM stereo, FM/AM superheterodyne tuner
Quartz-locked PLL digital synthesizer system

FM tuner

Frequency range 87.5 – 108 MHz
Antenna terminals 75 ohms unbalanced
Intermediate frequency 10.7 MHz
Sensitivity (at 46 dB quieting)
19.5 dBf, 5.0 μ V (mono)
39.5 dBf, 50 μ V (stereo)
Signal-to-noise ratio (at 40 kHz deviation)
75 dB (mono)
69 dB (stereo)
Harmonic distortion 0.5% (mono), 1.5% (stereo) at 1 kHz
IM distortion 0.5% (mono), 1.5% (stereo)
Separation 45 dB (at 1 kHz)
Frequency response 40 Hz – 12.5 kHz \pm 0.5 dB
Selectivity 55 dB (at 300 kHz)
Capture ratio 1.0 dB
AM suppression ratio 55 dB
Image response ratio 40 dB
IF response ratio 80 dB
Spurious response ratio 80 dB
Output 400 mV, 4.7 kohms
(at 40 kHz deviation)

MW/LW tuner

	MW	LW
Tuning range	522 to 1,611 kHz (Italian model) 531 to 1,602 kHz (AEP, UK, West Germany model)	144 to 288 kHz (Italian model) 153 to 281 kHz (AEP, UK, West Germany model)
Antenna	AM loop antenna, external antenna terminal	
Intermediate frequency	450 kHz	

When the supplied AM loop antenna is used.

	MW	LW
Usable sensitivity	(999 kHz) 500 μ V/m	(230 kHz) 700 μ V/m
Signal-to-noise ratio	(999 kHz) 54 dB	(230 kHz) 50 dB
Harmonic distortion (400 Hz)	0.3%	0.3%
Selectivity (9 kHz)	35 dB	35 dB

General

Power requirements U K model: 240V AC, 50/60 Hz
AEP, West Germany, Italian model: 220V AC, 50/60 Hz

Power consumption 10 W

AC outlet 2 unswitched, max. 100W

Dimensions Approx. 355 × 82 × 324 mm (w/h/d)
(14 × 3 1/4 × 12 7/8 inches)

Weight Approx. 2.3 kg (5 lb 2 oz)

Accessories supplied Connecting cord (1)
FM antenna (1) (Except for West Germany model)
AM loop antenna (1)
RM-S920 remote commander (1)
Sony SUM-3 (NS) batteries (2)
Flat cord with 3-pin connectors (2)

SECTION 1 SERVICING NOTES

MODEL IDENTIFICATION

—Specification Label—

AEP model :
West Germany
(WG) model :
Italian (IT) model :
UK model :

AC : 220V~50/60Hz

AC : 240V~50/60Hz

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK OR DOTTED LINE WITH MARK ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

Note on Ceramic Filter (CF1, 2, 3) ▲ Replacement.

This set employs three ceramic filters (CF1, 2, 3) ▲ which should have the same color marking to identify their center frequency. Therefore FM IF offset adjustment by * D613, * D614 is necessary to match the center frequency of the ceramic filters used with FM intermediate frequency.

○ : Mounted
× : not Mounted

Ceramic filter		Mount		FM intermediate frequency (MHz)
Color mark	Center frequency (MHz)	* D613	* D614	
White	10,750	×	○	10,750
Red	10,700	×	×	10,700
Black	10,650	○	×	10,650

FM intermediate frequency is determined by the three types as shown above, Ceramic filters of same center frequency, i. e., of same color coding should be used for CF1, CF2 and CF3.

When replacing the ceramic filters, perform the FM Discriminator Adjustment.

▲ : AEP, UK Model : CF1, 2
WG, IT Model : CF1, 2, 3

SECTION 2 ELECTRICAL ADJUSTMENTS

FM SECTION

FM DISCRIMINATOR ADJUSTMENT

Setting :

Carrier frequency : 98MHz
Modulation : 1kHz, 40kHz deviation (100%)
Output level : 1mV (60dB)

Procedure :

1. Tune the set to 98MHz.
 2. Adjust T21 for 0V reading on the VOM.
- Note : FM tuning level adjustment should be made after FM discriminator alignment.

FM TUNING LEVEL ADJUSTMENT

Setting :

Carrier frequency : 98MHz
Modulation : 1kHz, 40kHz deviation (100%)
Output level : 17.8 μV (25dB)

Procedure :

1. Tune the set to 98MHz.
2. Adjust RV24 so that the TUNED LED goes on.

FM STEREO SEPARATION ADJUSTMENT

Procedure :

Carrier frequency : 98MHz
Output level : 1mV (60dB)
Modulation : Audio 400Hz : 16.25kHz deviation
Sub channel 38kHz : 16.25kHz deviation
Pilot signal 19kHz : 7.5kHz deviation

FM stereo signal generator output channel	VTVM connection	VTVM reading (dB)
L-CH	L-CH	(A)
R-CH	L-CH	(B) Adjust RV21 for minimum reading
R-CH	R-CH	(C)
L-CH	R-CH	(D) Adjust RV21 for minimum reading

L-CH Stereo separation : (A) - (B)
R-CH Stereo separation : (C) - (D)

The separations of both channels should be equal.

MW/LW SECTION

AM TUNING LEVEL ADJUSTMENT

BAND select switch : LW

Setting :

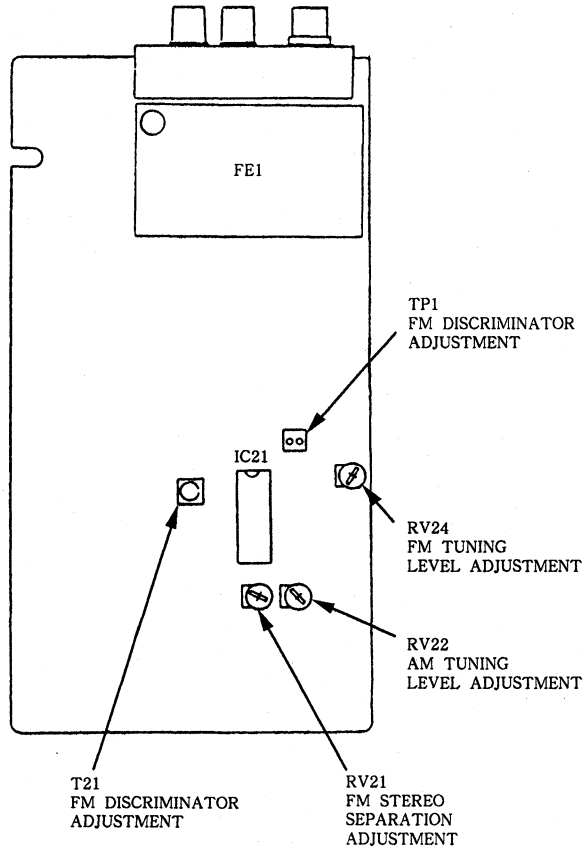

Carrier frequency : 216kHz
Modulation : 400Hz, 30% modulation

Procedure :

1. Set loop antenna so that the LAYOUT-FREE antenna input level becomes 2.5mV/m (68dB).
2. Tune the set to 216kHz.
3. Adjust the RV22 so that the TUNED LED goes on.

Adjustment Location :
- tuner board -

Note on Schematic Diagram

- *D613, *D614 : See page 2 for Note on Ceramic Filter (CF1, 2, 3) ▲ Replacement.
- All capacitors are in μF unless otherwise noted. pF : $\mu \mu F$
- 50WV or less are not indicated except for electrolytics and tantalums.
- All resistors are in Ω and $\frac{1}{4}W$ or less unless otherwise specified.
- Δ : internal component.
- \square : nonflammable resistor.
- B+ : B+ Line
- B- : B- Line
- \square : adjustment for repair.

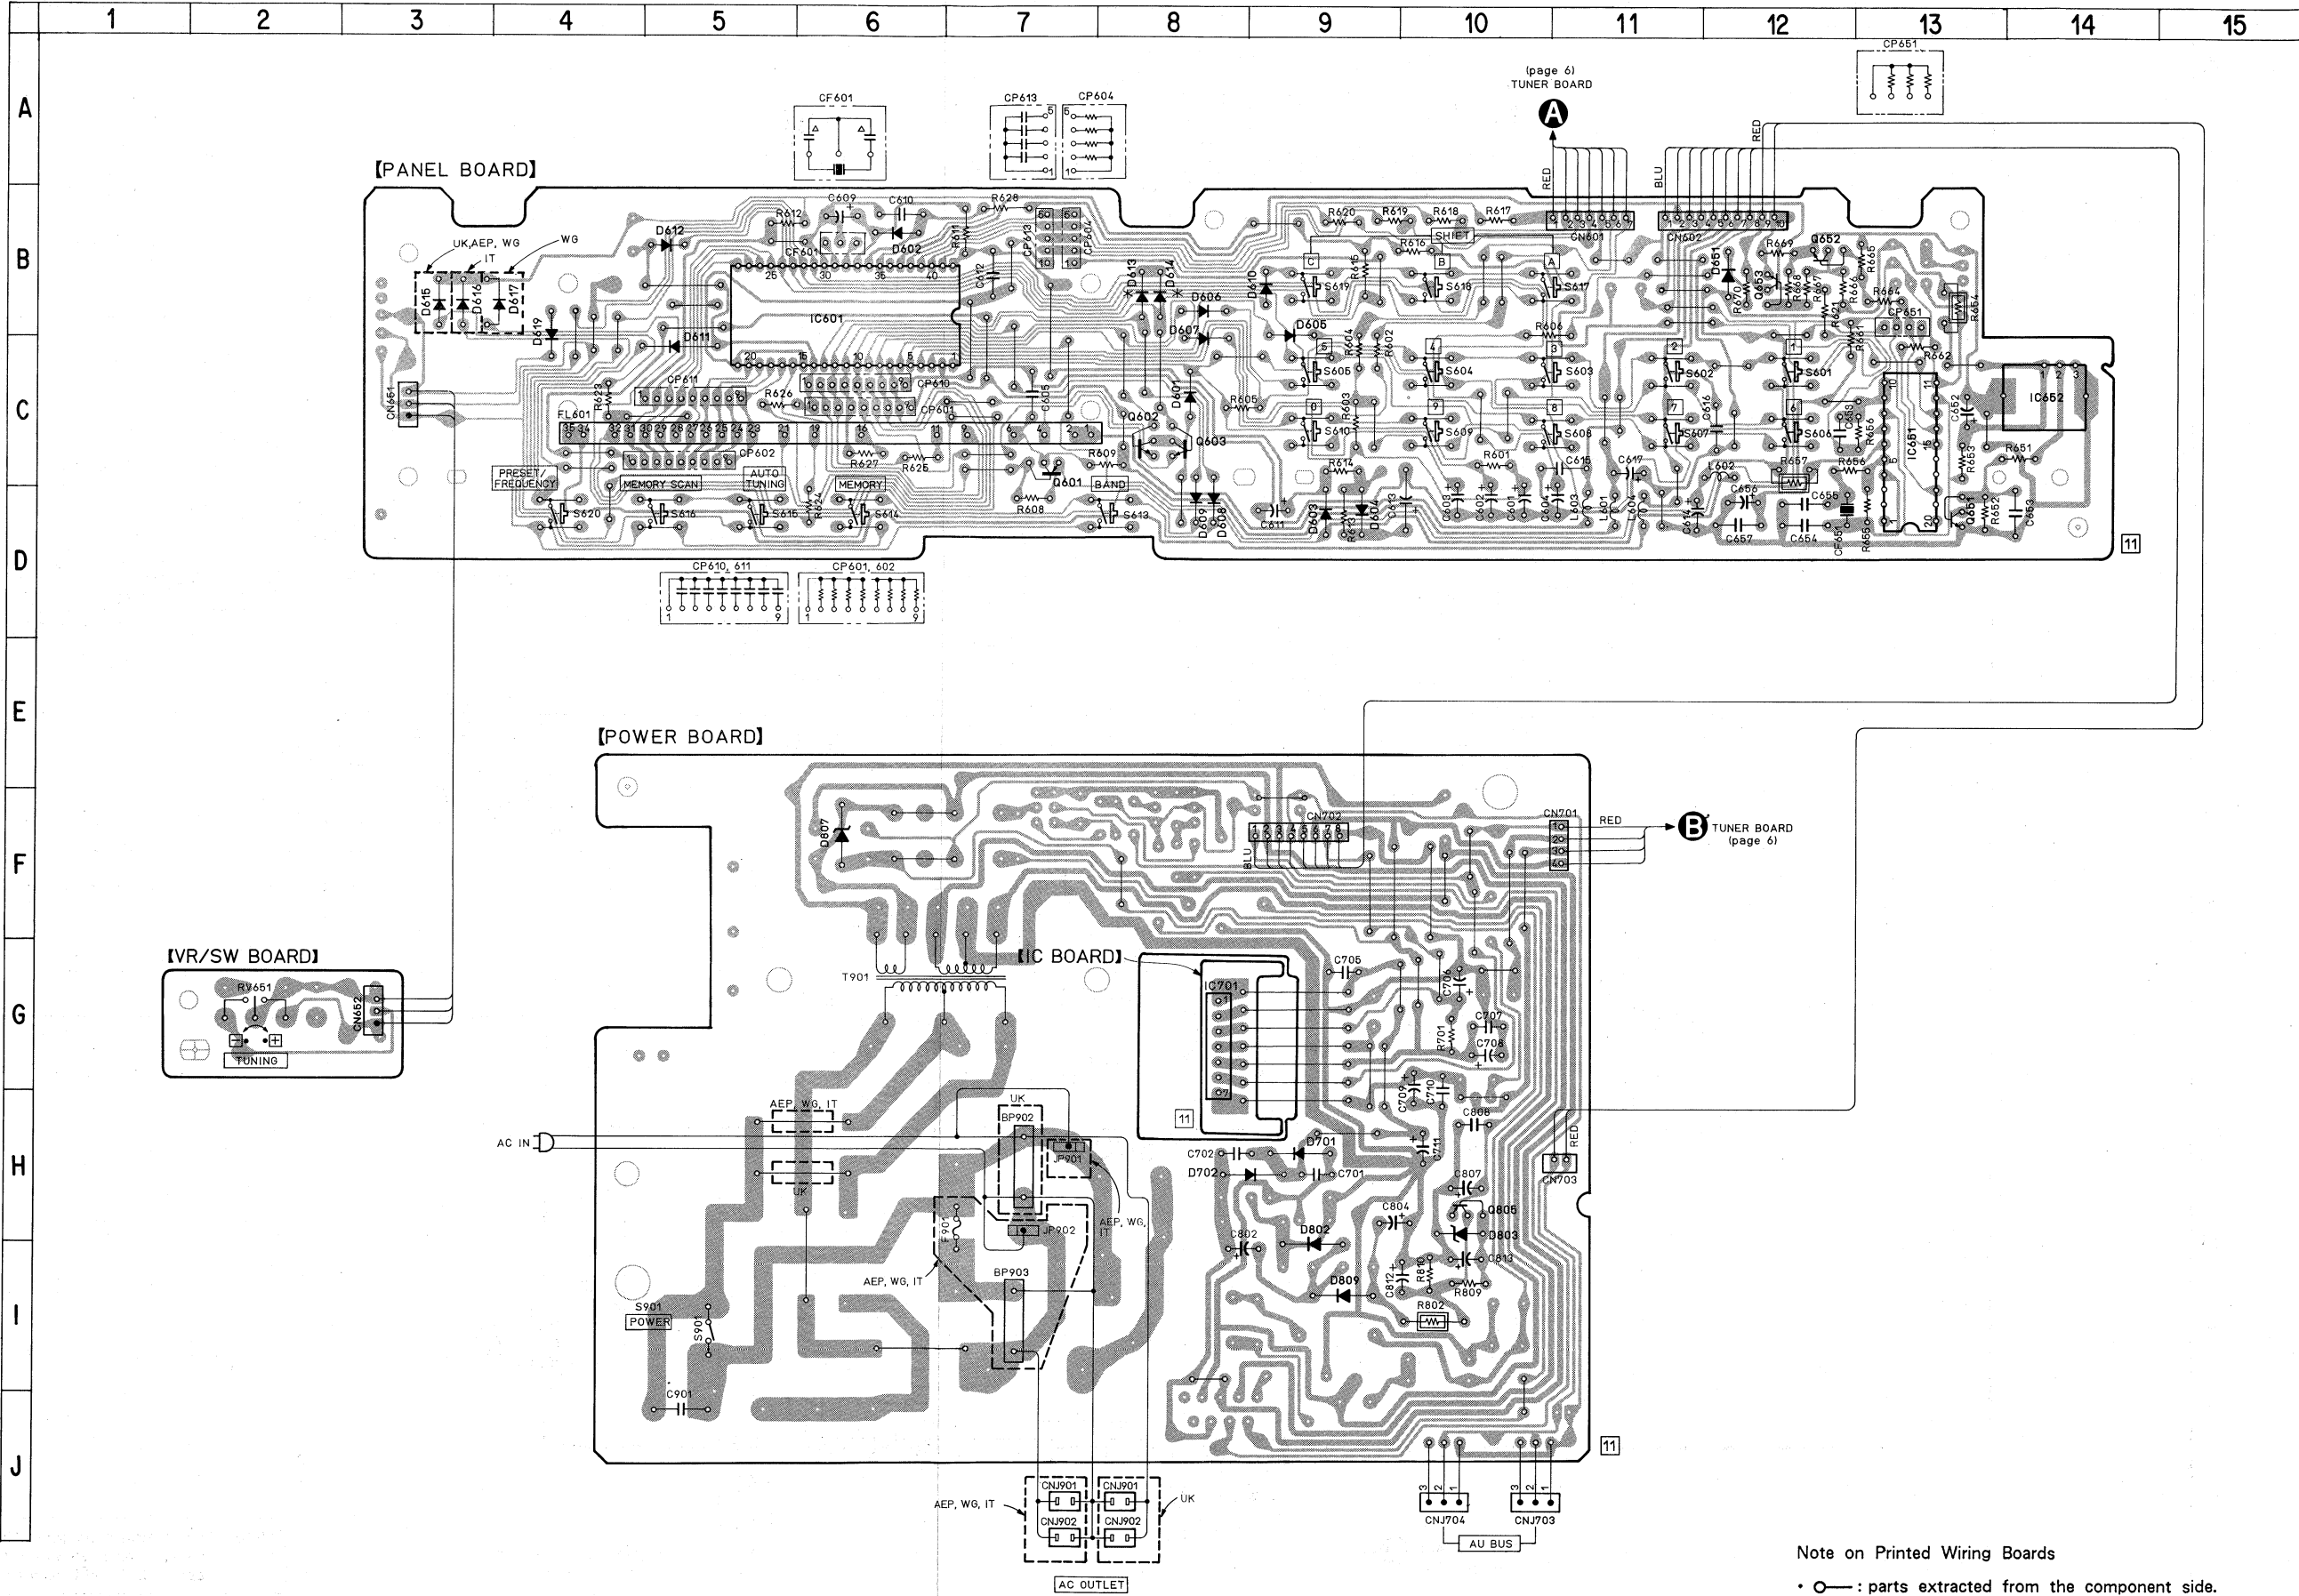

- Voltage and waveforms are dc with respect to ground under no-signal (detuned) conditions.
- no mark : FM
- () : AM
- < > : LW
- Voltages are taken with a VOM (Input impedance 10M Ω). Voltage variations may be noted due to normal production tolerances.
- Signal path.
- \Rightarrow : FM

SECTION 4

EXPLODED VIEW

NOTE:

- The mechanical parts with no reference number in the exploded views are not supplied.
- The construction parts of an assembled part are indicated with a collation number in the remark column.
- Items marked "★" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

- Due to standardization, parts with part number suffix -XX and -X may be different from the parts specified in the components used on the set.
- Color Indication of Appearance Parts
Example:

(RED) ... KNOB, BALANCE (WHITE)
<div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> ↑ Cabinet's Color </div> <div style="text-align: center;"> ↑ Parts Color </div> </div>
- WG: West Germany model
- IT : Italian model

The components identified by mark  or dotted line with mark  are critical for safety. Replace only with part number specified.

SECTION 5

ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:MF: μ F, PF: μ F.**RESISTORS**

- All resistors are in ohms.
- F: nonflammable

COILS

- MMH: mH, UH: μ H

SEMICONDUCTORSIn each case, U: μ , for example:
 UA...: μ A..., UPA...: μ PA...,
 UPC...: μ PC, UPD...: μ PD...

The components identified by mark  or dotted line with mark  are critical for safety. Replace only with part number specified.

- WG: West Germany model
- IT : Italian model

SECTION 2

SERVICING NOTES

PROTECTION OF EYES FROM LASER BEAM DURING SERVICING

This set employs a laser. Therefore, be sure to follow carefully the instructions below when servicing.

CAUTION

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

1. Laser Diode Properties

- Material: GaAlAs
- Wavelength: 780 nm
- Emission Duration: continuous
- Laser Output: max. 44.6 μ W*

* This output is the value measured at a distance of about 200 mm from the objective lens surface on the Optical Pick-up Block.

2. During service, do not take the Optical Pick-up Block apart, and do not adjust the APC circuit. If there is a breakdown in the APC circuit (including laser diode), replace the entire Optical Pick-up Block (including APC board).

BESKYTTELSE AF ØJNE MOD LASERSTRÅLING UNDER SERVICE

I dette apparat anvendes laserlys. Derfor skal nedenstående instruktioner nøje følges under service.

Følg iøvrigt instruktionerne i servicemanualen.

ADVARSEL!!

Under service må øjnene ikke komme nær objektiv-linsen på den optiske pick-up enhed. I tilfælde af at det er nødvendigt at kontrollere udsendelsen af laserlys, skal det ske i en afstand af mere end 25 cm fra den optiske pick-up.

1. Laser-dioe data

- Materiale: GaAlAs
- Bølgelængde: 780 nm
- Udstråling: Kontinuerlig
- Laseroutput: Max. 0,4 mW*
- * Målt i 1,6 mm afstand fra overfladen af objektiv-linsen på den optiske pick-up enhed.
- Klassifikation: Klasse IIIb.

2. Adskil aldrig den optiske pick-up enhed under service, og juster ikke APC kredsløbet (Automatic Power Control). Hvis APC kredsløbet (incl. laser-dioden) bryder ned, skal hele den optiske pick-up enhed (incl. APC printkortet) udskiftes.

LASER ADVARSEL MÆRKNING

Følgende mærkning findes indvendig i apparatet:

1. Advarsel Mærkning

VAROITUS: Laite sisältää, laserdiodin, joka lähettää (näkömätöntä) silmille vaarallista lasersäteilyä.

HOW TO OPEN THE DISC TRAY WHEN POWER SWITCH TURNS OFF

Caution: When you work, keep the set horizontal.

DISC TRAY REMOVAL

NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT

The laser diode in the optical pick-up block may suffer electrostatic breakdown because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body.

During repair, pay attention to electrostatic breakdown and also use the procedure in the printed matter which is included in the repair parts.

The flexible board is easily damaged and should be handled with care.

NOTES ON LASER DIODE EMISSION CHECK

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe from more than 30 cm away from the objective lens.

LASER DIODE AND FOCUS SERCH OPERATION CHECK

1. Make POWER switch on with no disc inserted and disc table closed.
2. Confirm that the following operation is performed while observing the objecting lens.

- ① Confirm that laser beam is spread.
- ② Up and down motion of the objective lens. (3 times)

SECTION 3
ELECTRICAL ADJUSTMENTS

1. Perform adjustments in the order given.
2. Use YEDS-18 disc (3-702-101-01) unless otherwise indicated.
3. Use the oscilloscope with more than 10MΩ impedance.

RF PLL Frequency Adjustment

Procedure :

1. Connect test point TP (ASY) to ground with jumper wire.
2. Turn POWER switch on.
3. Connect the frequency counter to test point TP (PCK).
4. Adjust RV201 so that the reading on frequency counter is 4.3218MHz±30kHz.
5. Remove lead wire connecting TP (ASY) and ground.
6. Put disc (YEDS-18) in and press ▷ button.
7. Confirm that the reading on frequency counter is 4.3218MHz.

Adjustment Location : main board

E-F Balance Adjustment

This adjustment should be made when replacing Optical Pick-up Block.

Procedure :

1. Connect test points TP (ADJ) and TP (TES) to ground with jumper wires.
2. Connect oscilloscope to test points TP (TEO) and TP (A, G).
3. Turn POWER switch on.
4. Put disc (YEDS-18) in and playback the 6th selection.
5. Adjust RV101 so that the oscilloscope waveform is symmetrical on the top and bottom in relation to 0V.

Note : Take sweep time as long as possible to obtain best waveform.

Focus Bias Adjustment

This adjustment should be made when replacing Optical Pick-up Block.

Procedure :

1. Connect oscilloscope to test points TP(RF) and TP (RF G).
2. Turn POWER switch on.
3. Put disc (YEDS-18) in and playback the 6th selection.
4. Adjust RV104 for an optimum waveform eye pattern or so that the peak is maximum. Optimum eye pattern means that shape "◇" can be clearly distinguished at the center of the waveform.

RF Signal Reference Waveform (eye pattern)

When observing the eye pattern, set the oscilloscope for AC range and raise vertical sensitivity.

REFERENCE

Focus/Tracking Gain Adjustment

A frequency response analyzer is necessary in order to perform this adjustment exactly.

However, this gain has a margin, so even if it is slightly off, there is no problem. Therefore, do not perform this adjustment.

Focus/tracking gain determines the pick-up follow-up (vertical and horizontal) relative to mechanical noise and mechanical shock when the 2-axis device operate.

However, as these reciprocate, the adjustment is at the point where both are satisfied.

- When gain is raised, the noise when the 2-axis device operates increases.
- When gain is lowered, it is more susceptible to mechanical shock and skipping occurs more easily.
- When gain adjustment is off, the symptoms below appear.

	Gain	Focus	Tracking
Symptoms			
● The time until music starts becomes longer for STOP →▷PLAY or automatic selection (⏮ ⏭ buttons pressed). (Normally takes about 2 seconds.)		low	low or high
● Music does not start and disc continues to rotate for STOP →▷PLAY or auto-matic selection (⏮ ⏭ buttons pressed.)		—	low
● Sound is interrupted during PLAY. Or time counter display stops progressing.		—	low
● More poise during 2-axis device operation.	high	high	high

The following is a

high focus

REFERENCE

Focus Bias Adjustment

This adjustment should be made when replacing Optical Pick-up Block.

Procedure :

1. Connect oscilloscope to test points TP(RF) and TP (RF G).
2. Turn POWER switch on.
3. Put disc (YEDS-18) in and playback the 6th selection.
4. Adjust RV104 for an optimum waveform eye pattern or so that the peak is maximum. Optimum eye pattern means that shape "◇" can be clearly distinguished at the center of the waveform.

● RF Signal Reference Waveform (eye pattern)

When observing the eye pattern, set the oscilloscope for AC range and raise vertical sensitivity.

Focus/Tracking Gain Adjustment

A frequency response analyzer is necessary in order to perform this adjustment exactly.

However, this gain has a margin, so even if it is slightly off, there is no problem. Therefore, do not perform this adjustment.

Focus/tracking gain determines the pick - up follow - up (vertical and horizontal) relative to mechanical noise and mechanical shock when the 2-axis device operate.

However, as these reciprocate, the adjustment is at the point where both are satisfied.

- When gain is raised, the noise when the 2-axis device operates increases.
- When gain is lowered, it is more susceptible to mechanical shock and skipping occurs more easily.
- When gain adjustment is off, the symptoms below appear.

	Gain	Focus	Tracking
Symptoms			
● The time until music starts becomes longer for STOP →▷PLAY or automatic selection (⏮ ⏭ buttons pressed. (Normally takes about 2 seconds.)		low	low or high
● Music does not start and disc continues to rotate for STOP →▷PLAY or auto - matic selection (⏮ ⏭ buttons pressed.)		-	low
● Sound is interrupted during PLAY. Or time counter display stops progressing.		-	low
● More poise during 2 - axis device oper - ation.		high	high

The following is a simple adjustment method.

-Simple Adjustment-

Note : Since exact adjustment cannot be performed, remember the positions of the controls before performing the adjustment. If the positions after the simple adjustment are only a little different, return the controls to the original position.

Procedure :

1. Keep the set horizontal.
(If the set is not horizontal, this adjustment cannot be performed due to the gravity against the 2 axis device.)
2. Insert disc (YEDS-18) playback the 6th selection.
3. Connect oscilloscope to main board TP(FEO).
4. Adjust RV102 so that the waveform is as shown in the figure below. (focus gain adjustment)

- Inccornt Examples (DC level changes more than on adjusted waveform)

5. Connect oscilloscope to main board TP(TEO).
6. Adjust RV104 so that the waveform is as shown in the figure below. (tracking gain adjustment)

- Inccornt Examples (fundamental wave appears)

- Inccornt Examples (higher fundamental wave than for low gain)

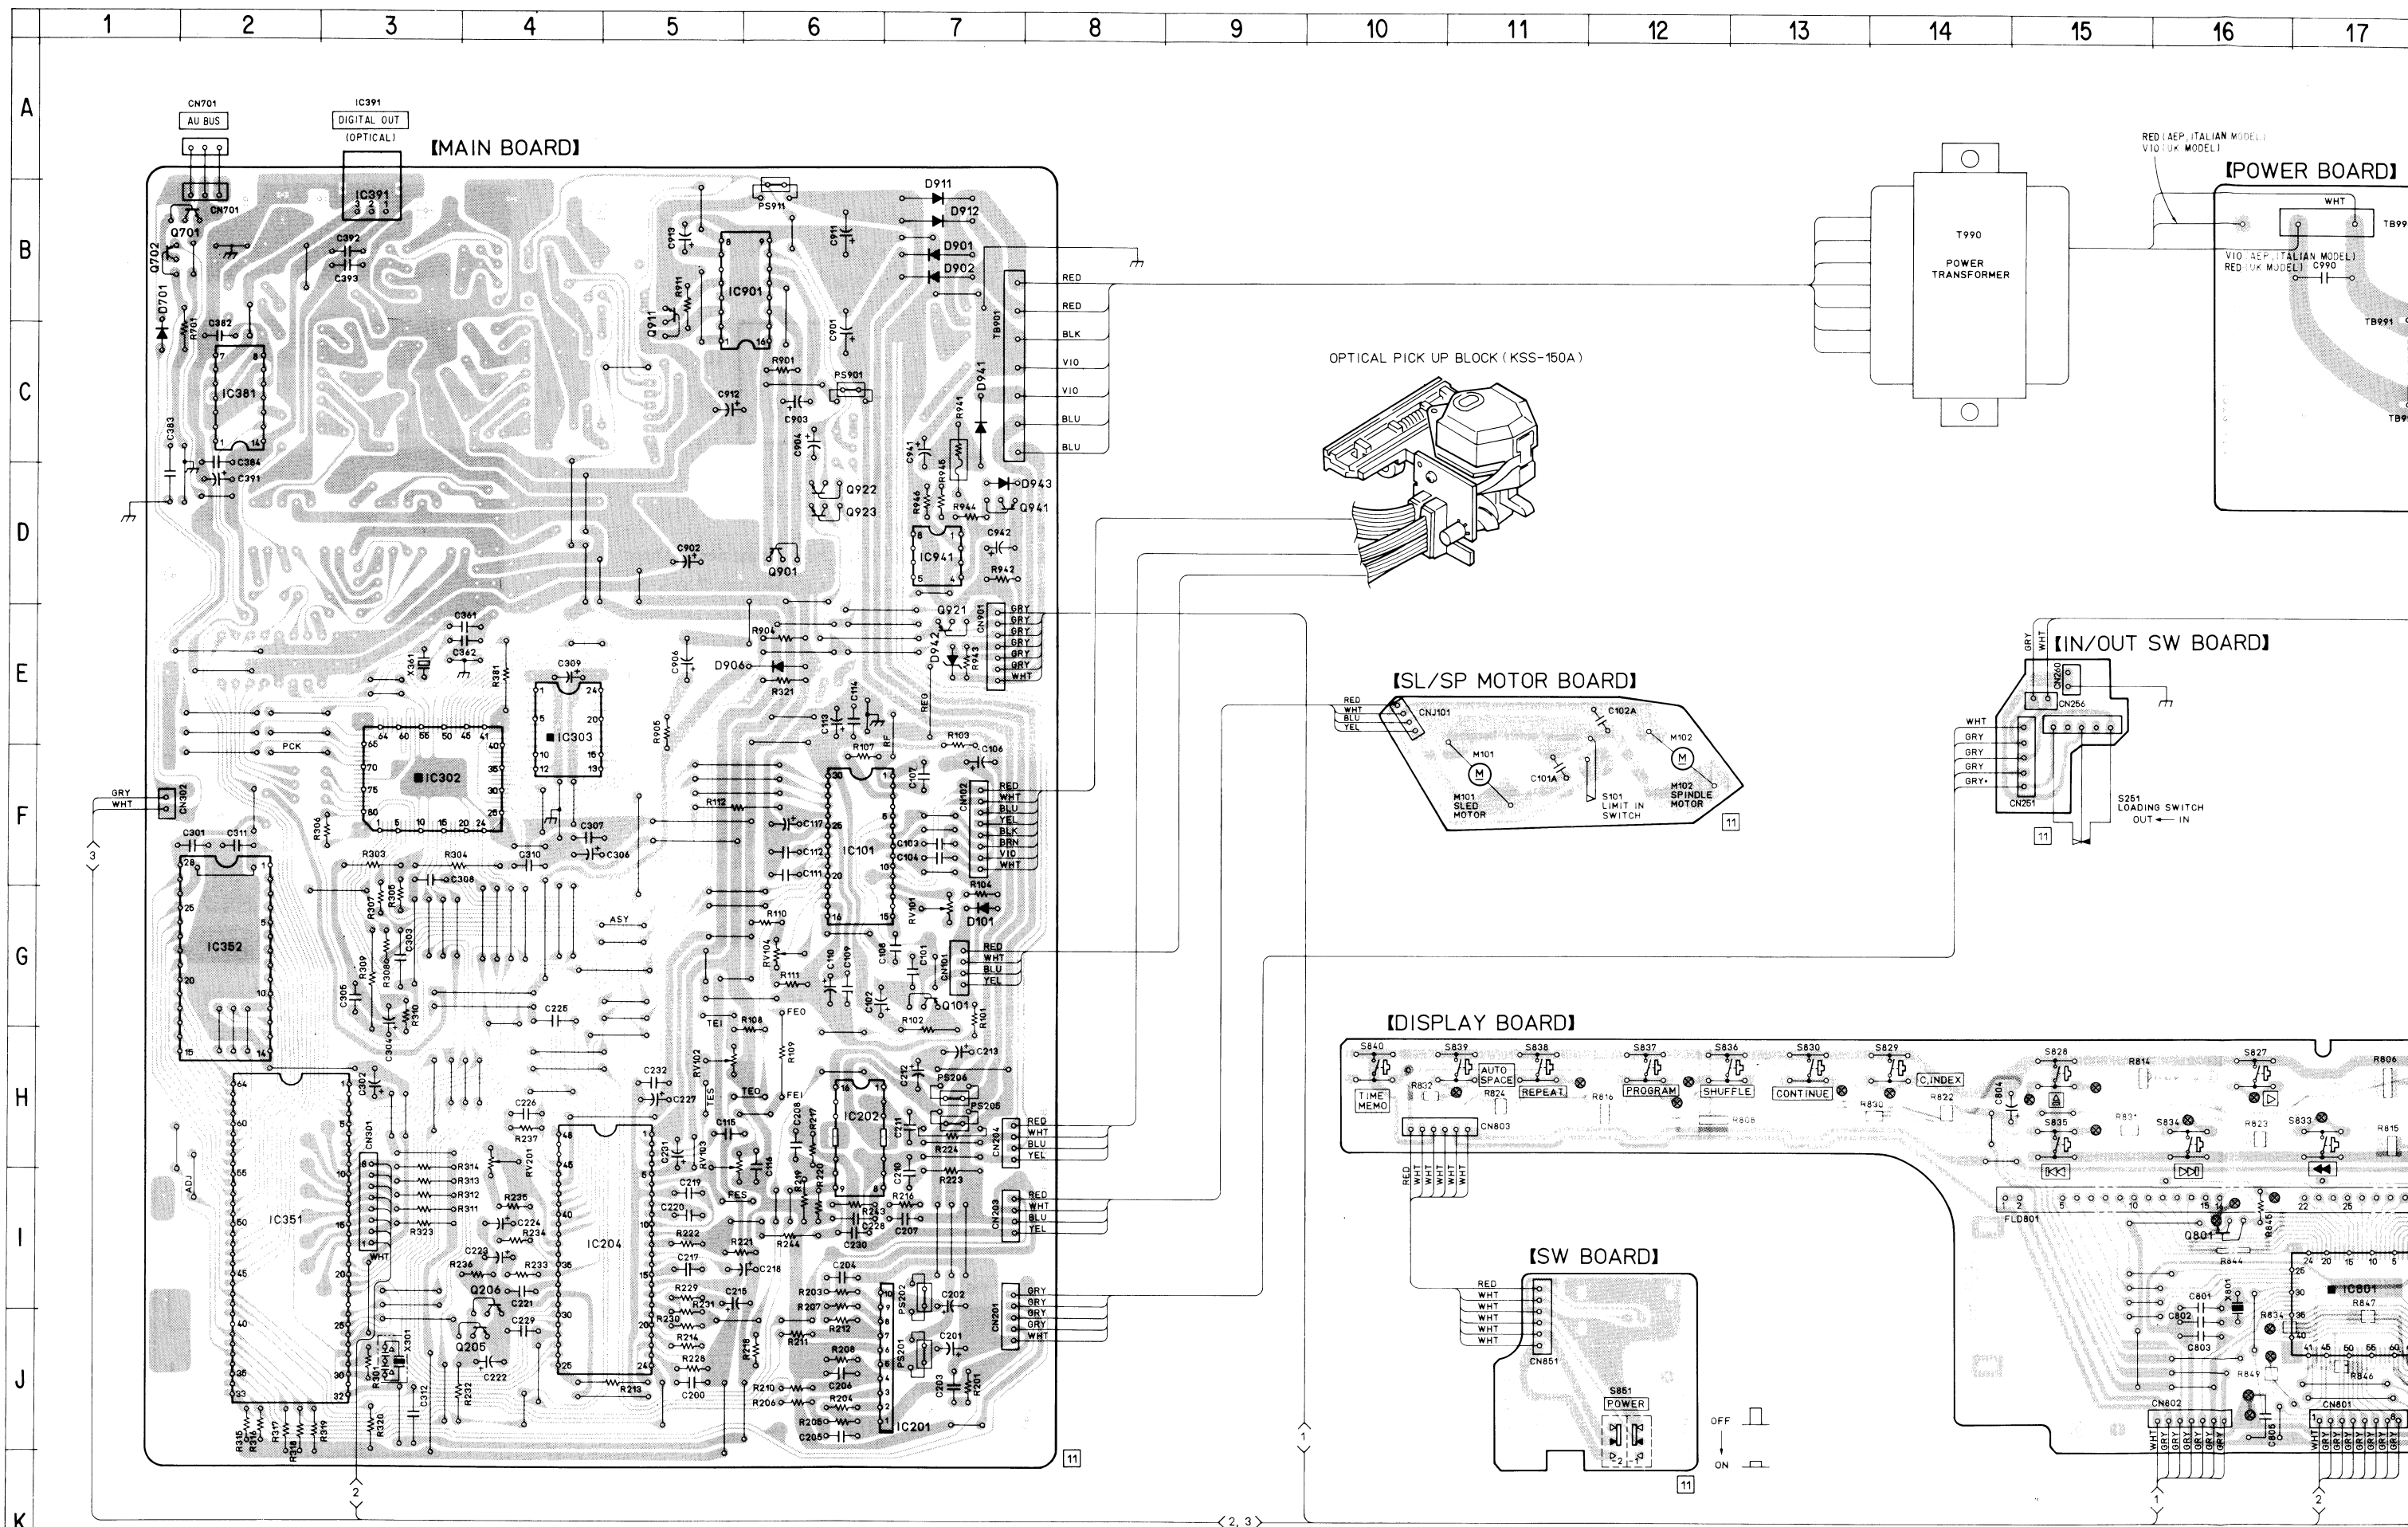

Adjustment Location : main board
Focus Gain Adjustment

SPECIFICATIONS

Turntable

Platter	30 cm (12 in.)
Motor	DC servo motor
Drive system	Belt drive
Speed	33 $\frac{1}{3}$ rpm/45 rpm switchable
Wow and flutter	0.08% (WRMS)
Signal-to-noise ratio	65 dB (DIN-B)
Automatic system	Return, reject, lead in.

Tonearm

Type	Statically
Pivot-to stylus length	200 mm (7 $\frac{7}{8}$ in.)
Overall arm length	236 mm (9 $\frac{1}{4}$ in.)

Cartridge

Type	Moving magnet type
Frequency response	20 Hz – 20kHz
Stylus	ND-155G

General

Dimensions	355 × 95 × 335 mm (w/h/d) (14 × 3 $\frac{3}{4}$ × 13 $\frac{1}{4}$ inches)
Weight	Approx. 2.3 kg (5 lb 2 oz)
Power requirements	AEP model: 220 V AC, 50/60 Hz UK model: 240 V AC, 50/60 Hz E model: 110–120 V, 220–240 V adjustable, 50/60 Hz
Power consumption	3 W
Accessory supplied	45-rpm adaptor (1)
Optional accessories	Replacement stylus ND-155G Stat spray XP-C10 Cleaner XP-C1, XP-C2

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK  OR DOTTED LINE WITH MARK  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

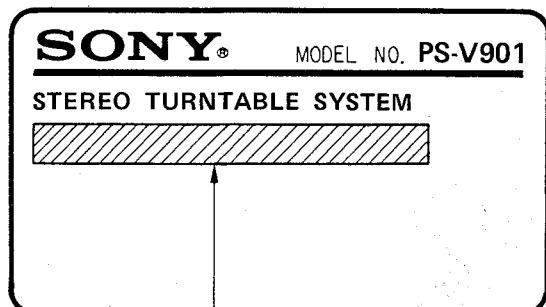

STEREO TURNTABLE SYSTEM
SONY®

SECTION 1 GENERAL

MODEL IDENTIFICATION

— Specification Label —

AEP model: AC 220 V 50/60 Hz 3 W

UK model: AC 240 V 50/60 Hz 3 W

E model: AC 110–120/220–240 V 50/60 Hz 3 W

LOCATION AND FUNCTION OF CONTROLS

- 1 45-rpm Adaptor
- 2 SPEED selector
- 3 Drop point adjustment hole
- 4 Cueing lever (▼/▼)
- 5 Tonearm
- 6 Armrest
- 7 SIZE SELECTOR
- 8 ◀ (start)/▶ (stop) button
- 9 Center spindle
- 10 Rubber mat
- 11 POWER button
- 12 Cartridge

Drop-point Adjustment

The tonearm drop-point during auto play has been factory-adjusted. If necessary, readjust it as follows.

To move the drop-point toward A, turn the adjustment screw clockwise with a screwdriver.

To move the drop-point toward B, turn the adjustment screw counterclockwise with a screwdriver.

SECTION 2 ADJUSTMENT

Speed Adjustment

Note: Be sure to perform 45-rpm adjustment before 45-rpm.

1. Put a stroboscope board on the mat.

2. Set the SPEED switch to 45.

Depress the lifter knob to make a lift-up mode and move the arm above to the outer most groove of a record.

Adjust RV1 so that the striped pattern of stroboscope board is stationary.

3. Set the SPEED switch to 33.

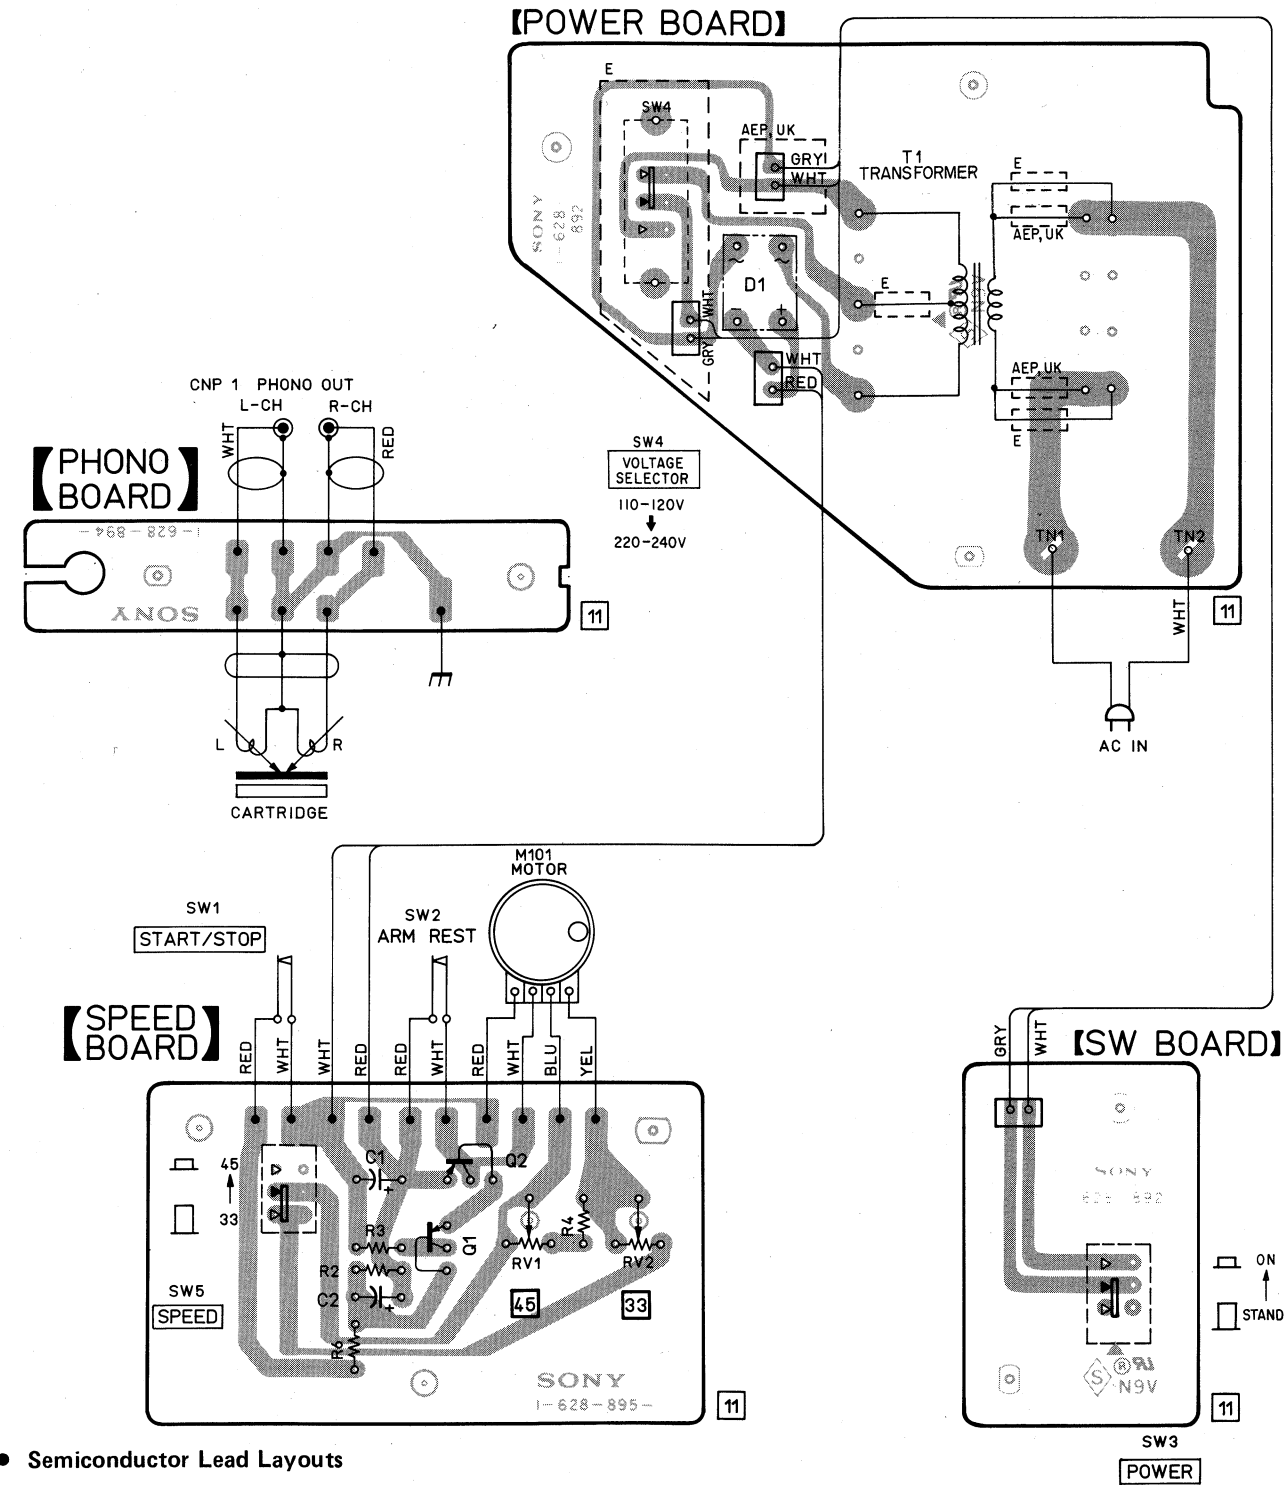

Adjust RV2 in the same way.

Adjustment Location:

SECTION 3
DIAGRAMS

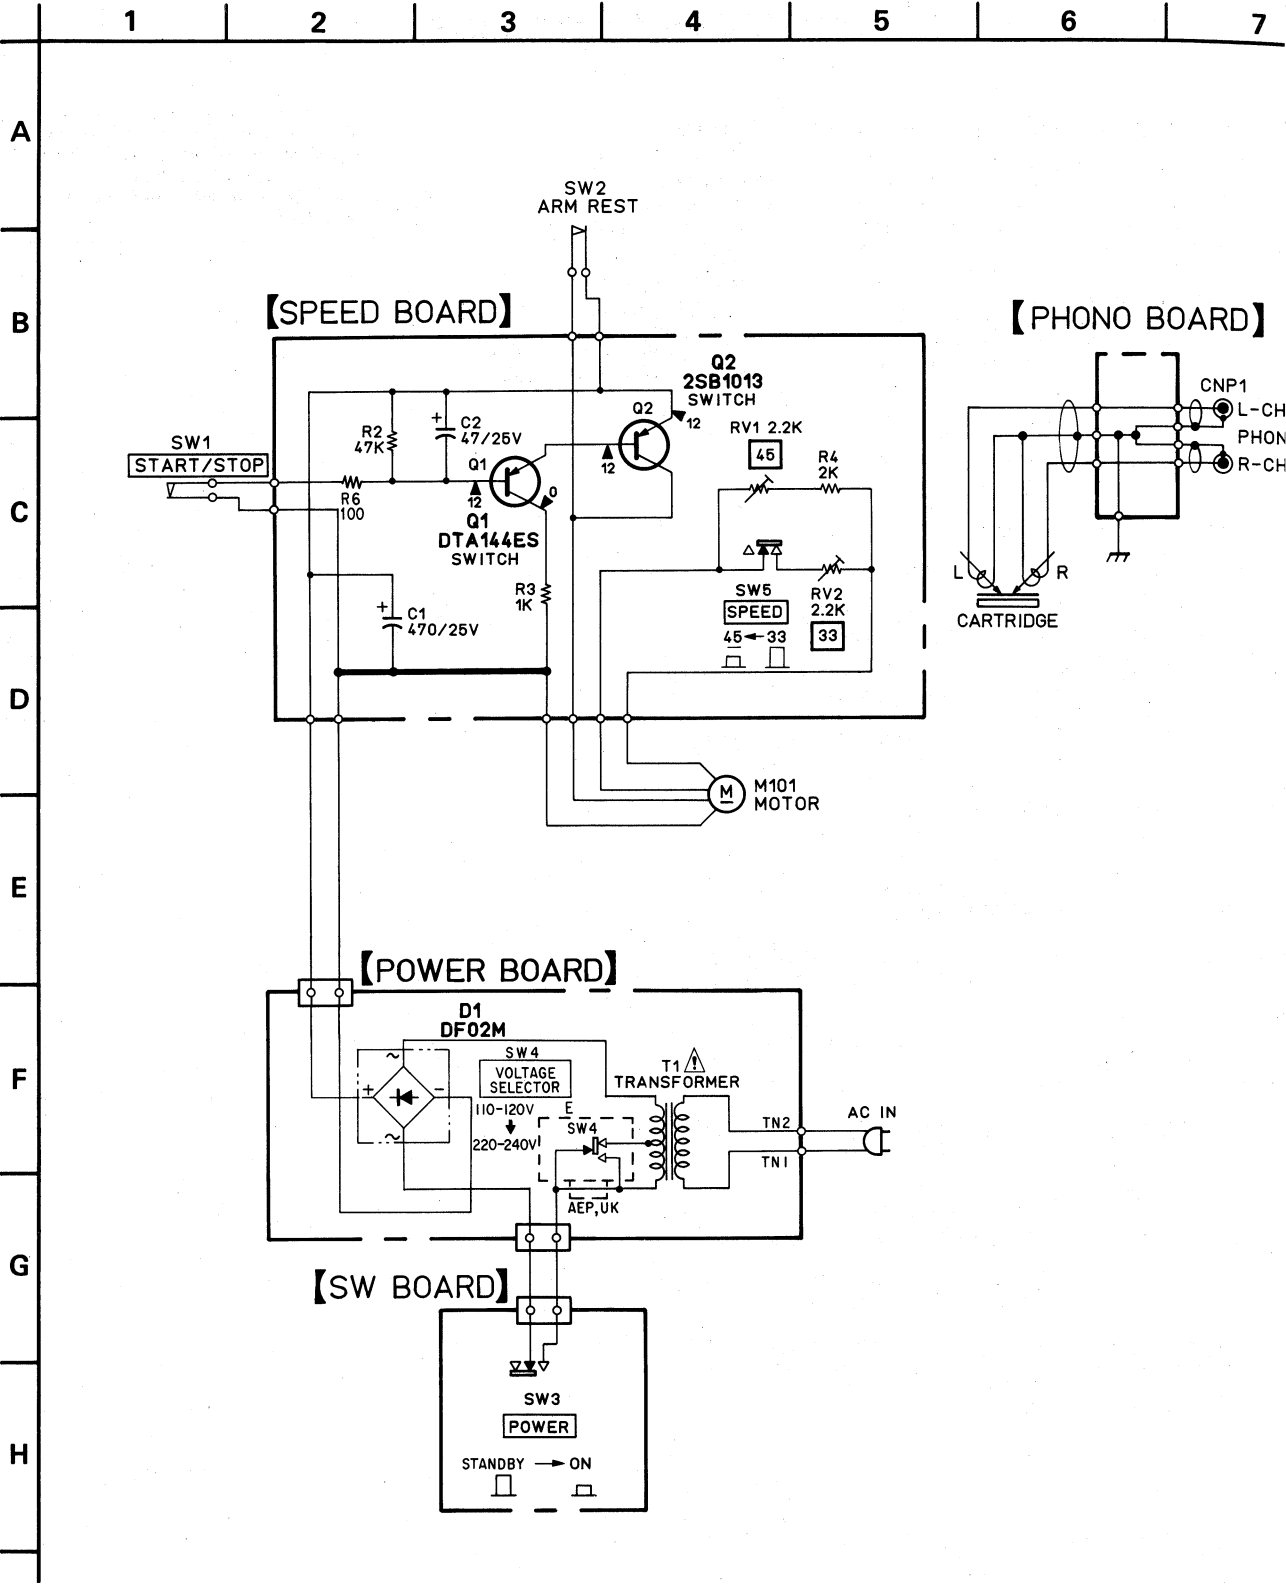

3-1. PRINTED WIRING BOARDS

• Semiconductor Lead Layouts

3-2. SCHEMATIC DIAGRAMS

Note:

- All capacitors are in μF unless otherwise noted. pF: μpF 50WV or less are not indicated except for electrolytics and tantalums.
- All resistors are in Ω and $\frac{1}{4}\text{W}$ or less unless otherwise specified.

Note: The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

- \square : adjustment for repair.

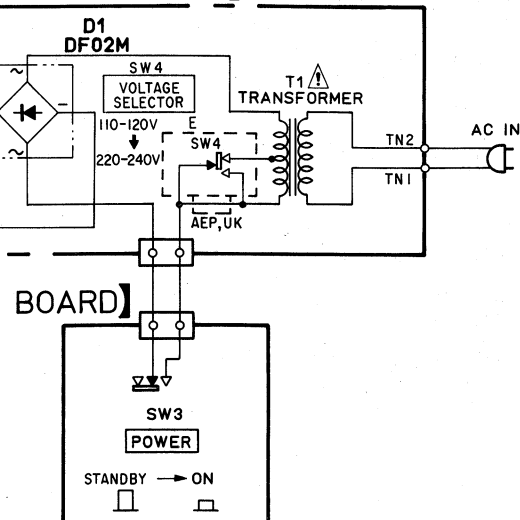

BOARD]

【PHONO BOARD】

POWER BOARD)

BOARD)

Note: The components identified by mark  or dotted line with mark  are critical for safety. Replace only with part number specified.

- ☐ : adjustment for repair.

NOTE:

- The mechanical parts with no reference number in the exploded views are not supplied.
- The construction parts of an assembled part are indicated with a collation number in the remark column.
- Items marked "★" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

4-1.

- Due to standardization, parts with part number suffix -XX and -X may be different from the parts specified in the components used on the set.

- Color Indication of Appearance Parts
Example:
(RED) ... KNOB, BALANCE (WHITE)

Cabinet's Color

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:MF: μ F, PF: μ F.**RESISTORS**

- All resistors are in ohms.
- F: nonflammable

COILS

- MMH: mH, UH: μ H

SEMICONDUCTORSIn each case, U: μ , for example:
 UA.... μ A..., UPA.... μ PA...,
 UPC.... μ PC, UPD.... μ PD...

The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.
